

SEWER CAMERA

SEWER CAMERA INSPECTIONS

A CLOSER LOOK BELOW THE SURFACE

Buried sewer lines can contrain issues that are difficult to see from above ground. Burgess uses a waterproof camera attached to a flexible cable to visually inspect the pipe's interior and help identify visible damage, standing water, and obstructions.

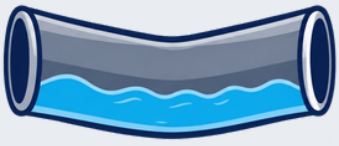
WHAT WE LOOK FOR

- Cracked or damaged sewer lines
- Separated sewer line joints
- Standing water that may indicate a low section of pipe
- Pipe blockages
- Debris within sewer lines

A LOOK INSIDE THE LINE

CRACKS & DAMAGE

SEPARATED JOINTS



STANDING WATER

BLOCKAGES & DEBRIS
