Re: Up and Away AC Pan

Further to our conversation regarding the Up and Away AC Pan and the preparation of the vessel. It's a straight forward project which can accommodate any sized home. The casing (vessel) which houses the AC Pan is completely covered with ice & water shield to seal all the corners and seams. Drip edge is applied to the sides of the opening and shingles are installed up to and around the casing. The opening is completely water tight and leak free. Also all work carried out carries a 10 year workmanship warranty.

SBT Construction looks forward to working with Azar Homes and the preparation of the AC Pan housing. We encourage builders and home owners to explore the Up and Away AC Pan for their next installation.

Respectfully,

Ken Charette  
SBT Construction

Re: Up and Away AC Pan

Further to our conversation regarding the above, I'd like to congratulate you and endorse this innovative way for the homeowner to install his new Air Conditioning Unit. The solution to every builder and/or home-owners frustration with limited space to work with.

This ingenious answer is perfect for every small, medium or custom-sized home. Advantages for the homeowner include, but are not limited to, preventing a damaged unit from lawn equipment, noisy units that are placed in close proximity to outside sitting areas, free from leaves and grass clippings, and taking up space outside when space is limited or could be better utilized.

Syles Mechanical Services looks forward to installing our Air Conditioning Units for Azar Homes and encourage every builder and home owner to explore the Up and Away AC Pan for their next install.

All the best.

Respectfully,

Grant Higginbottom  
Syles Mechanical Services
