Aluminum facades look & feel like wood

Beautiful facades - for a lifetime

Facade Profile

Click Profile

LYNX Designs

Lynx Designs presents aluminum building materials as the perfect alternative for anyone who appreciates the natural look of wooden facades but wants the advantages of aluminum.

Popular among Architects and Builders

In recent years, more and more building owners and architects have opted for this type of facade cladding. The reason for this? They are looking for materials that not only offer the natural look of wooden facades, but are also low-maintenance, fire-resistant, environmentally friendly and sustainable. The LYNX aluminum facade with a wood look has proven to be a particularly attractive option.

Unsurpassed durability

A standout feature of the wood-look aluminum facade is its impressive durability. Unlike traditional wooden facades that can rot, splinter, or crack, an aluminum facade is extremely resistant. It withstands pests and also has a high fire rating, adding an extra layer of safety for buildings.

An outstanding feature of the wood-look aluminum facade is its impressive durability.

Royal Oak

Maintenance Ease and Environmental Awareness

While wooden facades require regular care, our wood-look aluminum facades need minimal effort. No painting, no sealing – just simple cleaning with soap and water. And in terms of eco-friendliness, they are on par with traditional wooden facades. In fact, aluminum is 100% recyclable, leading to significantly less environmental impact. Additionally, the longevity of an aluminum facade reduces the need for replacement materials, as well as care and cleaning products.

Guaranteed and Certified

LYNX itself guarantees a 25-year warranty. The certified fire protection comes from the independent QAI Laboratories in California and, as a German company, we naturally attach great importance to the ›German engineering‹ label.

LYNX room divider,
Indoor, made from various
Click Profiles.

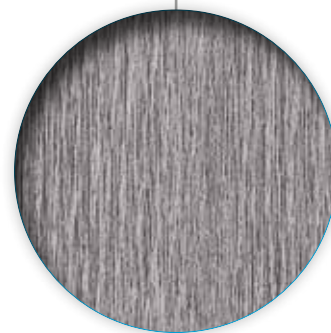

Six selected colors have so far been featured throughout the entire Lynx system. All profiles can be combined with each other.

Alpine Ash 01

Royal Oak 02

Silver Beech 03

There are six different decors, five of which are in deceptively real wood reproduction. They remain beautifully enduring, just like on the first day.

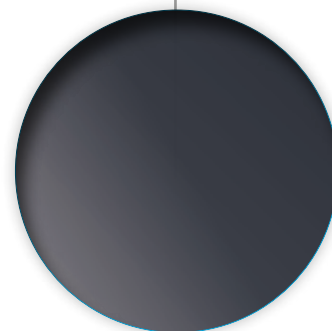

American Walnut 04

Ruby Pine 05

Anthracite 21

LYNX Colors

Our aluminum profiles get their distinctive, unmistakable appearance from the LYNX special foils. No matter what style you design your house in, our colors are appropriately coordinated.

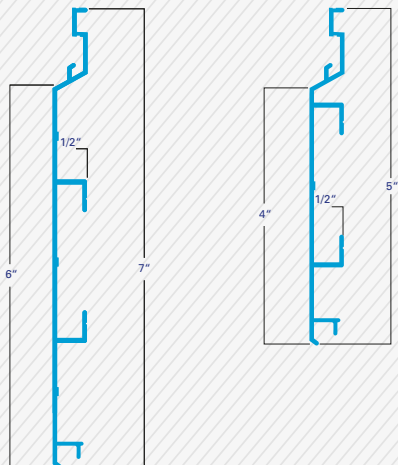

You have a choice between six different decors. A UV protection film ensures color fastness even after many years of intense sunlight, giving your facade a unique appearance.

Elegant Look and Feel

The high flexibility of our foils prevents shrinking and associated cracking. Thanks to the deep embossing of the surface, our panels also tactically convey the impression of wood. This is what makes our products so attractive for use in interior spaces.

You can also try out our LYNX color selector at www.lynx-designs.com/color1

The LYNX SIDING

Due to the high-precision manufacturing of our profiles, the LYNX sidings click into place with absolute accuracy. The clever tongue-and-groove connection always results in a reveal of 1/8". The installation of the profiles is carried out using a special stainless steel screw. Facade Panel and Contura profile can be installed seamlessly and mixed.

LYNX-CONTURA

In combination with our facade panels, these unique profiles create a modern, striking relief facade. They are available in 3 different dimensions (30, 50 and 70 mm) and can be combined with our two different width facade panels. This

provides sufficient variation options and enables completely new aluminum facades that can be installed both vertically and horizontally.

The LYNX Click Profile System

consists of two precisely manufactured, mirror-like aluminum shells. The first half is screwed directly to the substructure at the designated grooves (optionally on the wide or narrow sides). Then, the second shell is simply mounted with a 'click', creating a perfect aluminum square channel. Whether it remains empty or is used as an installation channel for electricity, water, or other supply lines is left to your imagination.

LYNX Screen Walls

The appearance of a building is defined by its facade. With the different cross-sections of our Click Profiles, it is possible to set creative accents through their combination, creating an exciting interplay of light and shadow. Large areas acquire a lively surface. Through partial installation, parts of the building structure or facade interact with each other in a dynamic way. Exceptional building materials for extraordinary structures.

There are virtually no limits to creativity
in facade design.
