

# Adaptive

Bookkeeping automation  
for construction

Adaptive is an AI-native bookkeeping automation and financial management software purpose-built for builders in the U.S. construction industry.

Whether you're a general contractor, custom home builder, or spec builder, Adaptive is here to bring you healthy cash flow, lower overhead, and financial clarity.

“

Our previous software was slow and clunky. Adaptive does the heavy lifting of the **data entry** for us with bills, it allows us to create and send draw requests in quickly. It took us from a place where **cash flow wasn't great** to where **cash flow should be!**
