| *Customizable packaging available | *No more utility trim SKU’s |
| * Works with Aluminum and Steel Siding. | *Adjustable and reusable. |

Support

The Terminator Group LLC believes this product will become a Consumable Commodity in the exterior envelope space. Once installers and contractors feel and use the product, it will become as familiar as ordering nails. The Terminator Group will support the transformation by providing the following support to both distribution and contracting.

Progressive Web based advertising to target audiences in the building envelope space using Google, Facebook and email marketing. Once established, orders will become routine as utility trim becomes a thing of the past.

Product installation at the field level. Terminator Group will use its vast network of installation professionals to get the word out to the streets. Terminator is proven to be very popular on the job site and we can support distribution by creating the backside demand.

In branch displays. Hands on displays and floor displays will help introduce your clients to the Terminator Clip.

Interactive Website. Terminatorclip.com will be a full functioning and interactive site, providing quick and simple access to instructional videos, installation videos and product Support videos. Terminator Group will use active QR codes on packaging to automatically link the sales team to information and updates. QR codes on packaging will allow contractors and installers to go directly to videos demonstrating how the Terminator Gripper will save them time and money.

Branch level support. The Terminator Group can meet with distribution at the branch or via email or other electronic platforms like Zoom or Google Meet. Our dedication to making Terminator Clip a high volume consumable is second to none.

Future product development. The Terminator Group is a company dedicated to making exterior envelope products that increase efficiency, decrease failures and call backs, while reducing carbon based construction waste. Partnering with manufacturing and distribution, Terminator Group will introduce products that solve old problems, find new efficiencies and reduce carbon footprints.

Industry Benefits

The Terminator Clip was developed by siding installers for siding installers. It solves many of the problems encountered during the installation of vinyl siding. It also solves many distribution problems, such as returns, restocking, inventory and SKU management. Contractors no longer have to deal with installation waste, inadequate installation methodology, ordering issues or call backs for falling siding.

The Terminator Group is dedicated to designing simple solutions to common problems found in the remodeling and new construction exterior envelope industry.

Distribution Benefits:

The Terminator Clip allows distributors to rethink their vinyl siding accessory system and utility trim is the best place to start. Many manufactures offer different sizes of J Channel to accommodate an ever increasing offering of siding profiles. The Terminator Group wants to make this simple...one universal $\frac{3}{4}$ inch J channel for all siding profiles, sizes and types with one termination method that works for all of it. This new methodology will...

- Eliminate all SKU's for over and under sized J Channel and utility trim, from every brand, profile and color.
- Reduce warehouse space. The Terminator Clip uses 90% less warehouse space compared with utility trim alone.
- Eliminates incorrect utility trim orders and out of stock issues.
- Eliminates returns and restocking.
- Eliminates excess utility trim inventory and inventory costs.
- Saves labor by eliminating the need to restock and count open boxes of utility trim.
- Saves on waste, breakage, loss and damage.
- The Terminator Clip is a commodity, and like nails, cannot be returned once opened.

The Terminator Clip box was developed with distribution in mind. The 100 count box replaces 25 pieces of utility trim, the average amount needed to side a 35 SQ home. The boxes are sized so that 150 boxes palletize perfectly at 40"x48"x48". All boxes are designed to withstand construction site abuse and are easy to add to any siding order.
