eclipse

Dynamic smart glass

by  eLstar

Eclipse is the world’s most advanced and sustainable dynamic smart glass, providing all the benefits of natural light, or blocking it in seconds at the flick of a switch, for privacy and cool comfort.

Eclipse reduces HVAC energy consumption by up to 30% (75% in some reports), lowering utility bills and CO₂ footprint.

Eclipse is based on electrophoretic ink technology - proven in more than 1 billion e-readers, enabling customizable closed state colours, and a completely colour-neutral open state.

At just 1mm thick, and available in custom sizes up to 2.9 x 3.3 m, eclipse is also the lightest, largest, dynamic smart glass available, and with full compatibility with lamination and insulating glass unit processes, is also the most compatible.

Contact our applications team to discuss how Eclipse can improve the sustainability of your next glazing project.

Features

Reduces solar heat gain by 85%

Improves occupant productivity and well-being

Reduces HVAC energy consumption by up to 75%

Reduces CO₂ footprint

Fast switching between privacy and transparency

No colour cast

Low power consumption

Affordable

Thin, light and up to 2940 x 3370 mm

Fully compatible with glass channel

Wide range of applications

Leverages existing manufacturing

All harmless earth-abundant materials

All low-energy processes

Zero toxic waste

Short delivery lead time

Low embedded carbon

99% recyclable

Eclipse Specifications

- Dynamic range: 0.1% to >70% VLT
- Switching speed: ~30 s, regardless of size
- Intermediate levels: unlimited
- Color: neutral black, customizable
- Colour rendering index: 98% (open)
- Haze: 3%
- Power consumption: 0.5W / m²
- Weight: 2.4 kg / m²
- Operational range: -20°C to +90°C

Insulating glass unit incorporating eLstar ELM
