VEGA ALUMINUM DECKING

Architectural aluminum decking engineered for long-term performance

LYNX Vega Aluminum Decking is an engineered decking system designed for architectural applications where dimensional stability, material consistency, and long service life are critical.

Manufactured from aluminum with precise profiles, Vega is intended for projects that require predictable performance across changing environmental conditions while maintaining a natural look and finish that brings elegance to any finish whether it is classic or modern.

PRODUCT PROFILE

Category: Aluminum Decking

Product Count:

Single-product system

Primary Application: Exterior decking for architectural and construction projects

Dimension: ¾" × 8 ½" × 12'

What It Is

Engineered aluminum decking with architectural precision and long-term stability.

LYNX Vega is developed as a single, integrated decking solution focused on structural reliability, clean detailing, and compatibility with contemporary architectural design.

Available Colors

LYNX Vega Aluminum Decking is available in three standard finishes:

Golden Savanna

Dawn Tundra

Amber Ridge

(Color options are intended to support a range of architectural palettes and exterior contexts.)

Where It Fits

- ✓ Residential and multi-residential decking
- ✓ Commercial and mixed-use exterior spaces
- ✓ Projects requiring material stability and controlled tolerances
- ✓ Applications where long-term performance is prioritized during specification

Key Characteristics

- ✓ **Aluminum construction**
Designed for stability and consistency compared to organic decking materials.
- ✓ **Architectural-grade profiles**
Clean lines and controlled tolerances support modern detailing and repeatable installation outcomes.
- ✓ **Long-term dimensional stability**
Aluminum structure minimizes movement related to moisture and environmental exposure.
- ✓ **System-based approach**
Developed as a complete decking product rather than a collection of mixed components.

LYNX Vega Aluminum Decking is a focused, system-driven decking solution designed for architects, builders, and developers seeking a stable, engineered alternative to traditional decking materials without relying on short-term performance assumptions.

For technical details, specifications, and project suitability, consult LYNX Designs documentation or project support materials.
