vator.*

The Art of *Elevator Design*

Artisan Elevators was established to serve homeowners seeking luxury, uniqueness, and comprehensive customization. Our products are specifically engineered to complement the high-quality standards of the homes for which they are designed.

Artisan clients value both design and function, seeking options that transcend the standard box elevator in an enclosed shaft. The Artisan Elevator is specifically designed to serve as an architectural focal point in the home rather than being hidden behind closed doors.

Artisan stand-alone, glass elevators have been installed in some of the finest homes across North America.

Our *Story*

Since 2018, Artisan Elevators has redefined vertical transportation from our headquarters in Syracuse, NY. We don't operate a volume factory; we run a craftsman's studio. By pairing an elite in-house team of electrical and mechanical engineers with traditional masters of the trade, we transform raw materials into functional masterpieces.

Our facility was built for the impossible. While others prioritize speed, we prioritize the “un-makeable,” utilizing state-of-the-art equipment and a growing portfolio of proprietary patents to solve the most complex spatial challenges. If your project demands distinction without compromise, you've found your answer.

Your dreams.
Our expertise.

Accessibility

Home elevators significantly enhance accessibility by removing the physical barrier of stairs, allowing individuals with mobility challenges, seniors, or those with disabilities to navigate multi-story homes safely and independently. This addition supports “aging in place,” enabling homeowners to remain in their preferred residence comfortably without the need for costly renovations or relocation due to mobility constraints.

Safety and Fall Prevention: Elevators eliminate the risk of falls associated with navigating stairs, providing a secure and stable means of transport between floors for those with balance issues or limited strength.

Convenience for All: Beyond personal mobility, they facilitate the easy transport of heavy items such as groceries, laundry, luggage, or strollers, reducing physical strain for all household members.

Increased Property Value and Marketability: Installing a home elevator can increase a property’s resale value and appeal to a broader range of potential buyers, including multi-generational families and retirees looking for future-proofed homes.

Glass *Elevators*

The Artisan Elevator blends stunning design with unmatched versatility, fitting into spaces where other elevators simply cannot. By integrating the hoistway and cab into a self-standing unit, we provide a high-end solution with minimal impact on your home’s structure.

Key Features:

Customized Clarity: Choose from acrylic, true glass, or low-iron ultra-clear panels in a shape and size tailored to your needs.

Seamless Aesthetics: Designed specifically as a glass elevator, we’ve hidden mechanical clutter by integrating guide rails and using a patented, ultra-thin floor design.

Small Footprint: Experience full wheelchair accessibility without compromising on beauty or square footage.

The Artisan isn’t just a lift; it’s a spectacular architectural feature built to your exact specifications.

Glass *Elevators*

VIDO Series:

Standardized Acrylic Elevators:
500 lb capacity (2-3 stop)

ARIA Series:

Customized Glass Elevators:
1000lb capacity (2-6 stop)

One-of-a-Kind:

Unique, highly customized,
engineered elevators

VIDO Series

The VIDO Series by Artisan Elevators represents a shift in home mobility. Designed to blend seamlessly into your existing home decor, the VIDO offers the accessibility you need without the heavy construction or space requirements of a traditional elevator.

Limited design features allow for quicker lead times and faster installation.

VIDO represents our standardized acrylic elevator. Compact Luxury. Panoramic Views. Effortless Accessibility.

Vido Series

Affordability

Custom look without the custom price.

Preserves Your Living Space

Traditional elevators require enclosed shafts and machine rooms. The VIDO is engineered for efficiency. Available in an ultra compact footprint of 36”x36” or wheel chair accessible size 36”x48”.

Minimal Construction, Maximum Convenience

Unlike traditional elevators that require digging a deep pit in your foundation, the VIDO is designed as a pitless unit, protecting your floors and simplifying site preparation. The packaging is reduced to fit through most doorways and hallways to allow for easy access to the final site of construction. Standard Components with connection to 120V power source reduces installation time and overall installation disruption.

INVEST IN YOUR HOME’S FUTURE

Installing a VIDO elevator not only improves accessibility for family and guests but increases your property value and ensures you can age in your home comfortably.

Luxury Features Come Standard

Includes integrated LED recessed ceiling lighting for a luxury feel. Automatic center parting gate, and frame-less clear landing doors come standard.

Safety and Reliability

Peace of mind is standard with every Artisan elevator. Equipped with automatic emergency battery lowering— if the power goes out, you won’t get stuck. Built-In Communication: Includes an emergency-in-car phone system. Easy Exit: Doors locks can be manually released from inside the elevator

ARIA Series

Open and airy. Customization allows for glass or acrylic to bring a visually lighter feel. Enjoy a smooth floating vertical experience in your home.

The Aria series allows homeowners to select finishes, trim, hardware, accessories, lighting, and more to meet their design vision.

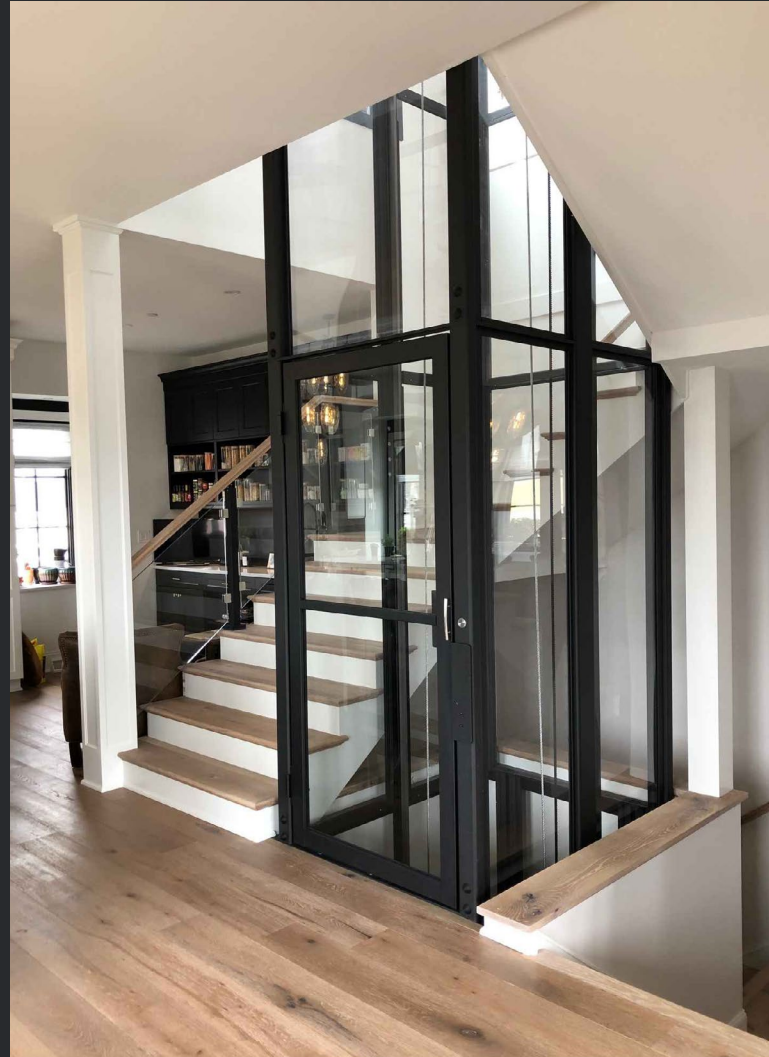

Elevation that breathes with a seamless design that integrates into your open floor plan.

The square and rectangular footprints available in the Aria series can be customized to specific measurements to optimize space.

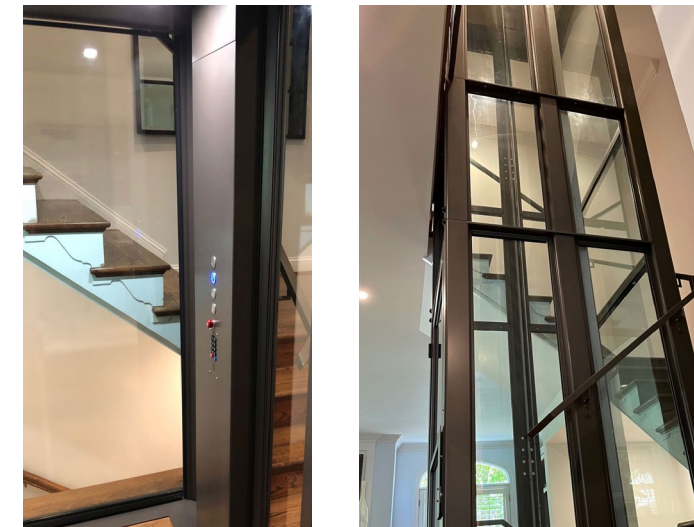

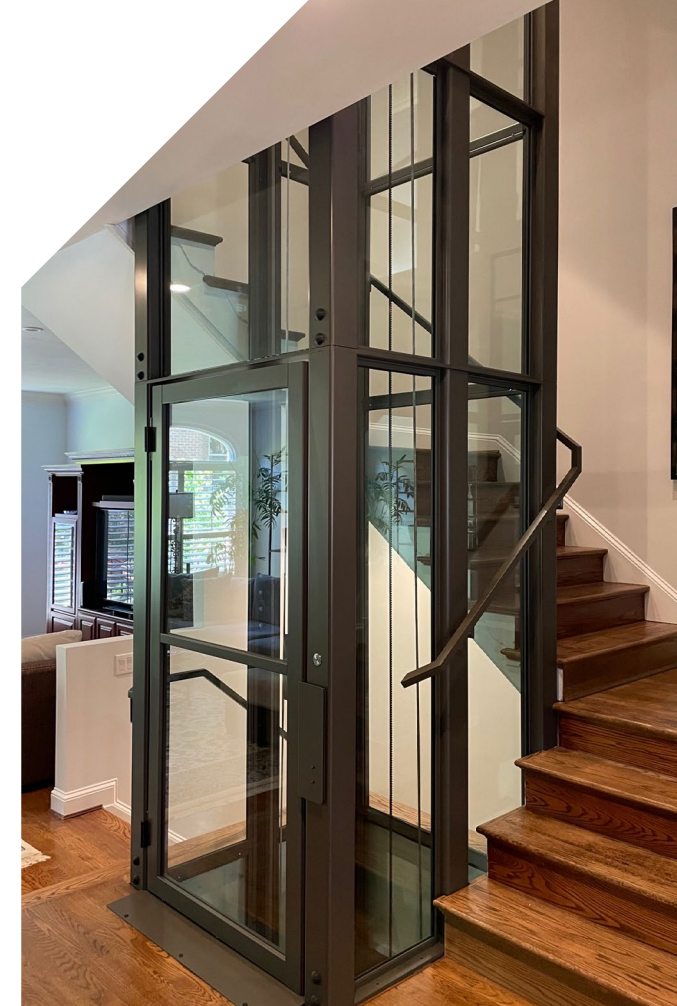

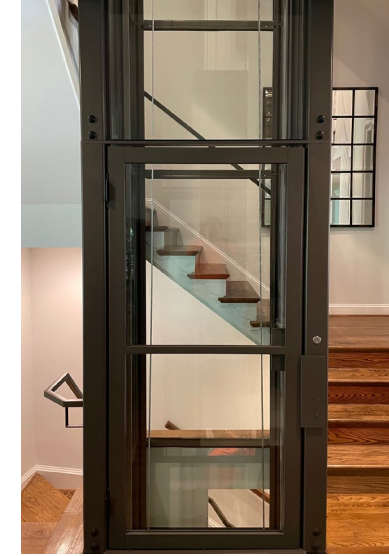

Aria: the Belvedere Edition

- Optional stainless steel accent for the side panels in the cab.
- Panels around the motor can be clear to show the workings of the elevator.
- Black Fine Texture powder coating is the most popular color as it fits well in most settings.

Aria: The Helix Edition

- Bronze Matte Metallic is another favorite choice in powder coating. It compliments woodwork and traditional decor.
- The Artisan frame can be used to attach your handrail (provided by others).

Aria: The Spectrum Edition

- Additional details such as LED lighting around the elevator make a remarkable impact!
- The glass floor around the elevator is a beautiful touch.
- The shallow pit can also be decorative, including the addition of lighting.

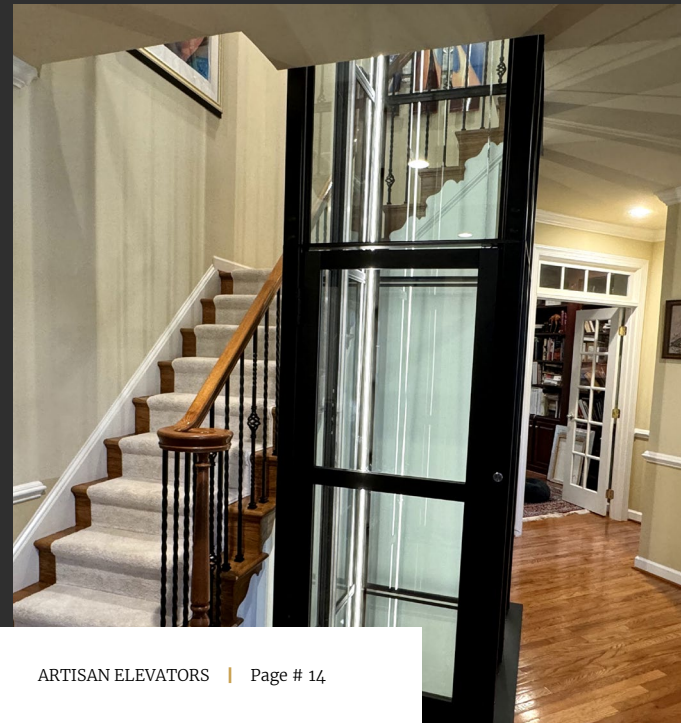

Aria: The Sterling Edition

- Landing doors can be configured for enter/exit opposite sides.
- The elevator can accommodate split levels or short floors.

Aria: The Versa Edition

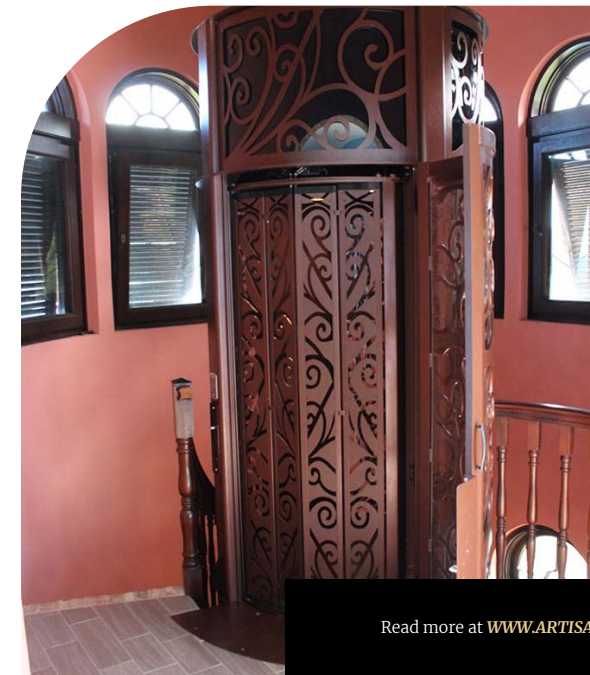

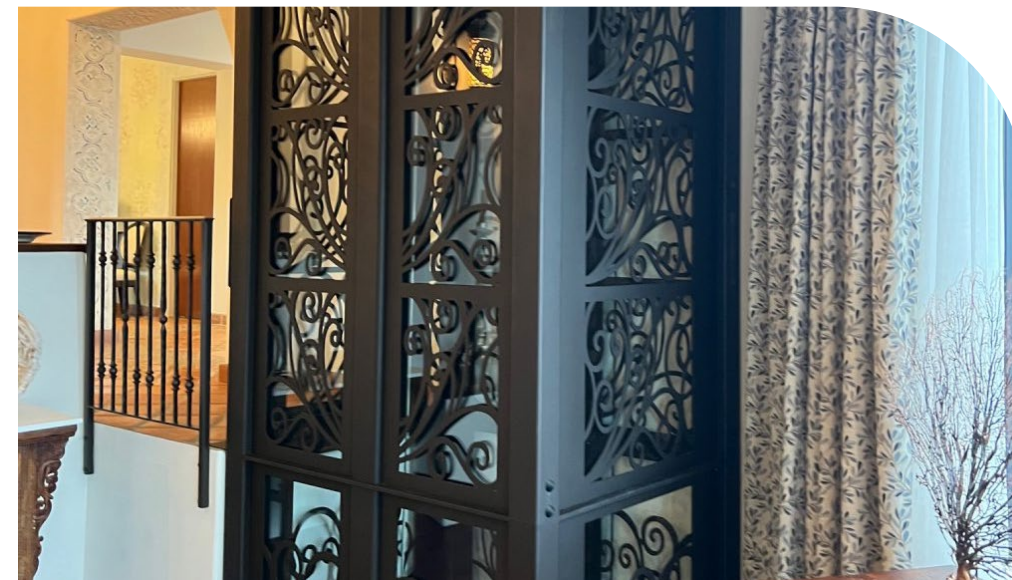

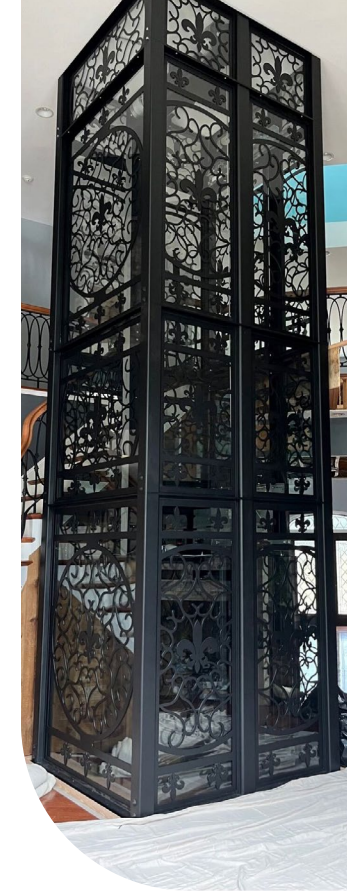

- LED lighting was added to the inside corners of the elevator frame to accent the elevator.
- LED lighting shown in white, but can be changed to full spectrum of colors.
- This elevator was designed to fit perfectly within an existing staircase, making it seem as if it was always there.

Birdcage *Elevators*

Artisan Elevators take design to the next level by adding one-of-a-kind ironwork or metallic banding for a truly custom look. Our talented staff can provide design suggestions, the birdcage design can be customized to match existing architectural features in the home, or the client can take inspiration from literally anywhere. Past projects have featured vintage birdcage designs with wrought iron and antique fixtures as well as more modern looks with rolled metal and bright metallic finishes. The possibilities are limitless.

Whatever clients choose, our skilled draftsmen create a 3D model and renderings for client review and approval. Our passion to give clients the best overall experience and customer service means that every client will have a complete understanding of the design, fabrication, and installation.

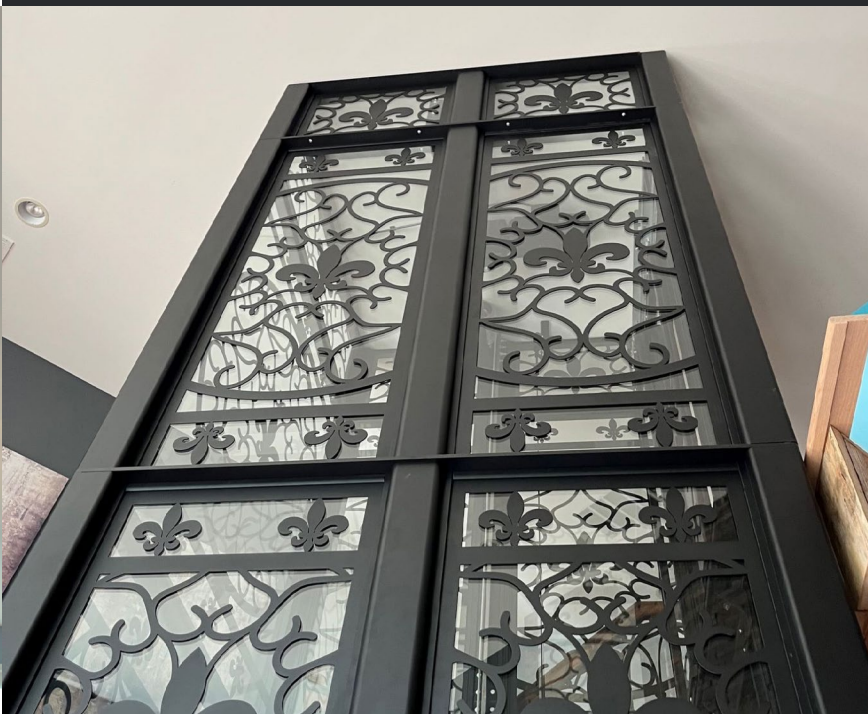

Birdcage: The Monarch Edition

- Gold accents make the elevator doors look amazing.
- Decorative components such as the lion head are available upon request.
- This was custom designed to fit in a small stairway.

Birdcage: The Versailles Edition

- This birdcage elevator boasts an extra large footprint, oversized cab, and sliding landing doors.
- This appears as a two-level elevator, but it actually goes through the wood floor to continue into the basement.
- The design features a fleur-de-lis in a unique pattern that was created by our design team and inspired by the client's interests and other home features.

Birdcage: The Downtown Loft Edition

- Custom meshing can be added to your glass elevator project to give a unique look.
- The elevator serves as focal point of this historic downtown apartment.
- Preserving the imported hardwoods, the elevator seamlessly blends with the existing staircase up to the top floor's waterfront views.

Birdcage: Heritage Classic Edition

- The scroll-work design on these panels was the result of team effort between the home owner and our engineers.
- The horseshoe shape give the elevator a unique look while maintaining a spacious cab.
- Shown here in custom Satin Nickel powder coat.

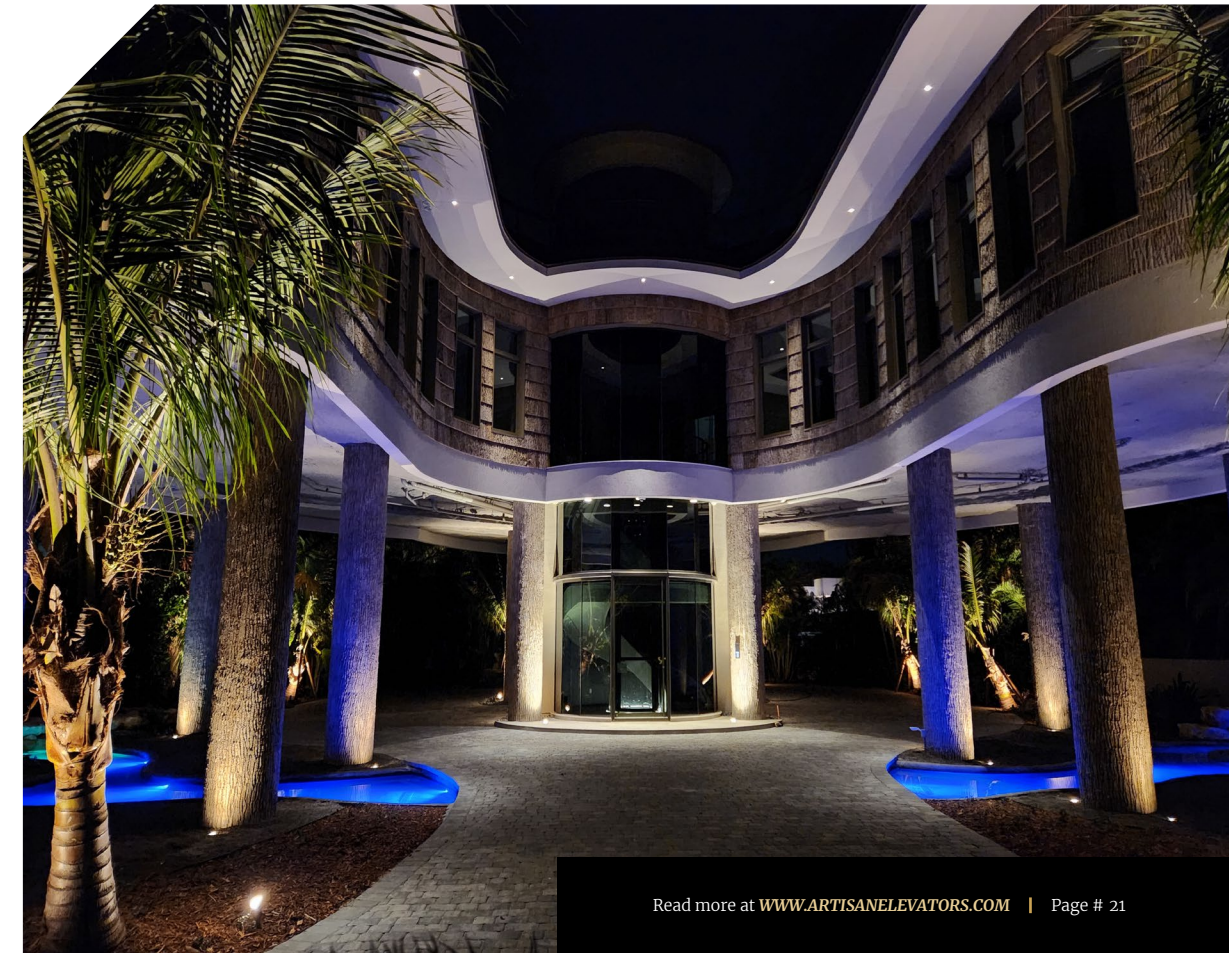

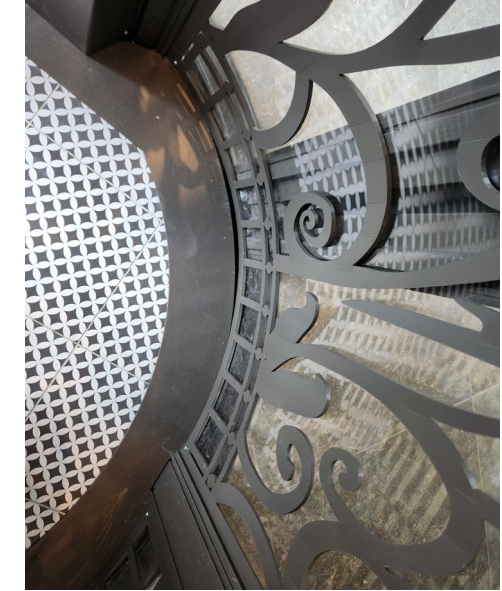

Birdcage: The Lodge Edition

- This elevator was restored and modernized preserving an old-world look.
- Paneling and wrought iron gives this elevator a unique strength that power through 4 levels up to the roof top access.
- This wrought-iron glass canopies offer a rare perspective on vertical travel, blending 19th-century elegance with 21st-century engineering.

Birdcage: The Tree-house Edition

- Artisan can work with your design elements to customize flooring and many other specific aspects of your elevator.
- Domed cab provides a unique look as this elevator rises up to meet the ocean and sky.
- The cylindrical architecture of this grand home demanded parody with this unique elevator.

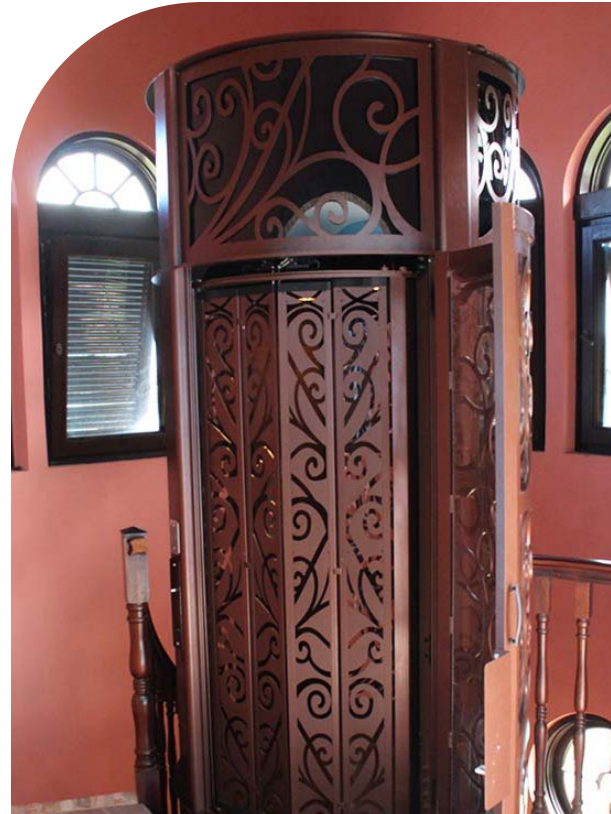

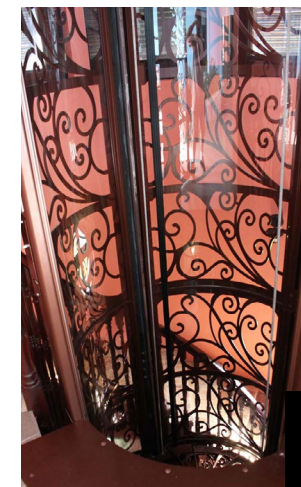

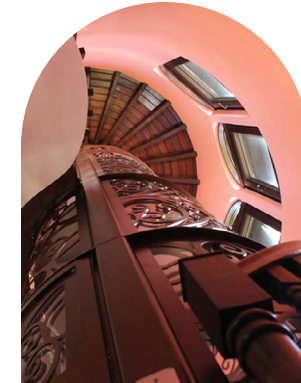

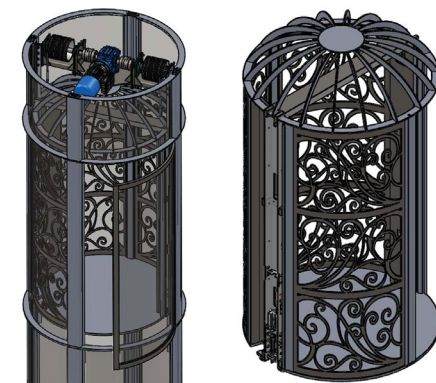

Birdcage: The Aviary Edition

- This truly vintage looking elevator is a work-of-art!
- The combination of birdcage scroll-work backed by steel mesh gives it a truly Artisan look.
- The shape is mostly round, with a flat face on the front, with custom wood framing surrounding the landing doors.

Rounded Birdcage Elevators

- This round birdcage design is what many people visualize when they hear 'birdcage elevator'. This project delivers that vision!
- This elevator is actually exposed to the outdoors on the coast. Artisan Elevators can hold up to the elements.
- The swirl design that makes up the panels was inspired by the crashing waves just 100 ft from the elevator.

Birdcage Design

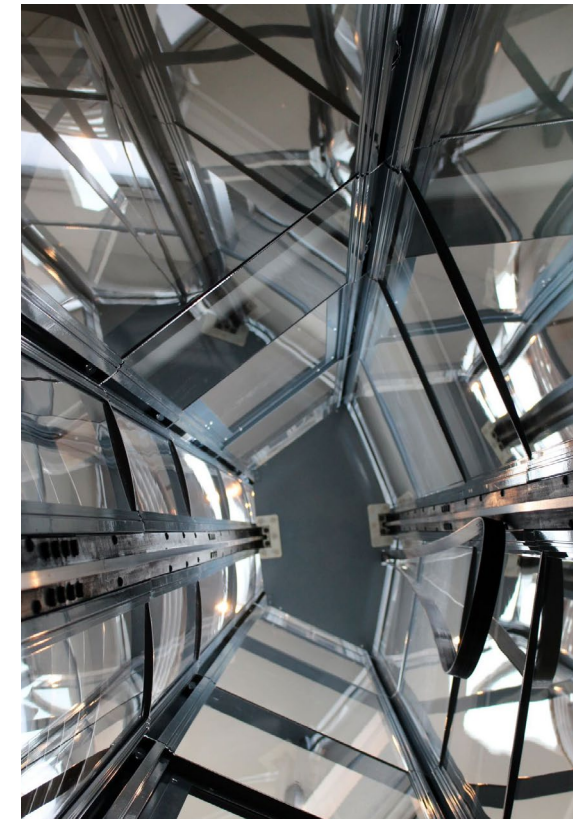

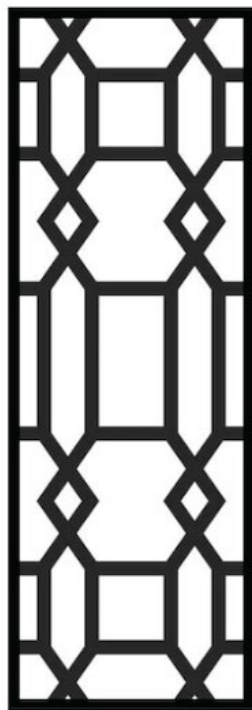

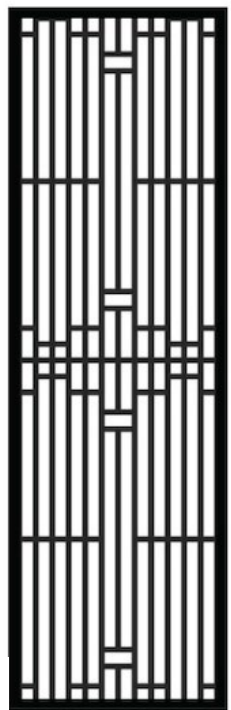

Artisan Elevators specializes in transforming the classic birdcage aesthetic into a personalized masterpiece. Whether you prefer the intricate detail of traditional woven mesh or a seamless, integrated design that complements your modern architecture, we bring your specific vision to life.

From initial concept to final installation, we provide the high-end customization you require to make your elevator a true centerpiece of your home.

One-Of-A-Kind

Artisan Elevators use a patented design that enables incredibly custom shapes and sizes. We can make an elevator that exactly fits your required footprint.

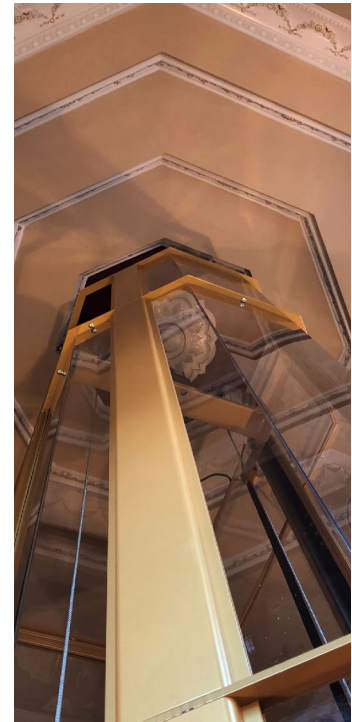

One-of-a-Kind: The Slimline Edition

- The footprint for this elevator is just 28" wide.
- This elevator was created to fit in a stairwell 28"x 48".
- Like all of our glass elevators, the hoistway is self standing, and only attaches at the landings for lateral support.

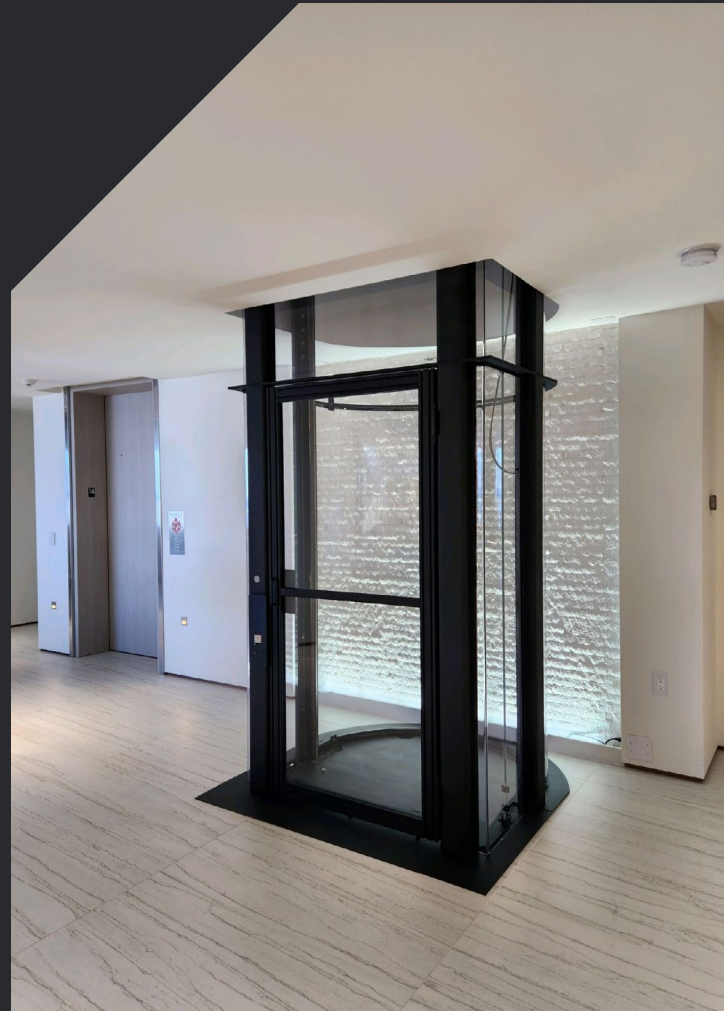

One-of-a-Kind: The Aurum Edition

- Modifying this marble staircase was not an option.
- Artisan Elevators matched the contour of the stairwell exactly and created an elevator that fits perfectly.
- The bold gold color fits perfectly in the decor of this luxury home.

One-of-a-Kind: The Atrium Edition

- We call this the 'Atrium' shape. It is a horseshoe shape like you would find in a hotel atrium.
- This spacious elevator will accommodate a wheelchair and attendant.

Freedom Hoistway Series

These adaptable elevators have several features making it useful for renovation projects.

- The Freedom Hoistway Elevators are pit-less and utilizes a patented thin platform to eliminate the need for a depression in your foundation (pit).
- This is very useful when there are concerns about cutting into the foundation, or simply the added cost. In addition to eliminating the pit, this elevator is capable of custom shapes and sizes that other elevators can't achieve.

Artisan Freedom Hoistways are residential elevators designed to provide a luxurious yet affordable means of transportation for multi-level homes.

- Cable drive system
- 100% code compliant
- 1000lb capacity
- Travels up to 50 ft
- Serves up to 6 stops
- Emergency battery lighting and lowering

Gate Options

Accordion Gates are a cost effective and popular option for all of our elevators. These come available in manual and automatic, and can be mounted to open from the left or right.

Additional customization of the accordion gates is available. Standard panels come in the following options:

Hinge system with .08" aluminum panels are available in perforated and solid:

Automatic 2-speed doors bring a sophisticated, commercial-grade feel to the home by utilizing two telescoping panels that slide over one another. This clever design significantly reduces the wall space required for the door to open, making it the perfect solution for homeowners who want a full-sized entrance in a tight architectural footprint. Also available as a 3-speed and typically for the Freedom Hoistway series.

Bi-fold gates can add an elegant and efficient look. Traditional sliding doors require a wide “pocket” inside the wall, often forcing you to sacrifice precious floor space. Our bi-fold gates stack compactly, allowing for a larger cab interior without increasing the size of the elevator shaft. Available in both automatic and manual.

Artisan has built a reputation on our ability to customize every aspect of an elevators. If there is a design concept you have in mind, we are happy to collaborate to bring your vision to life.

Powder Coating Colors

Artisan Elevators offers the following standard finishes. Custom colors can be accommodated at additional cost. The VIDO model is ONLY available in black or white.

White Fine Texture

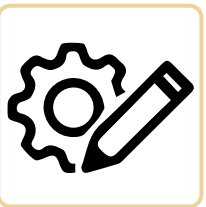

Gunmental

Tech Features and Options

Smart Home Integration:

We can customize our elevators for seamless integration with smart home devices allowing for personal settings and voice prompting.

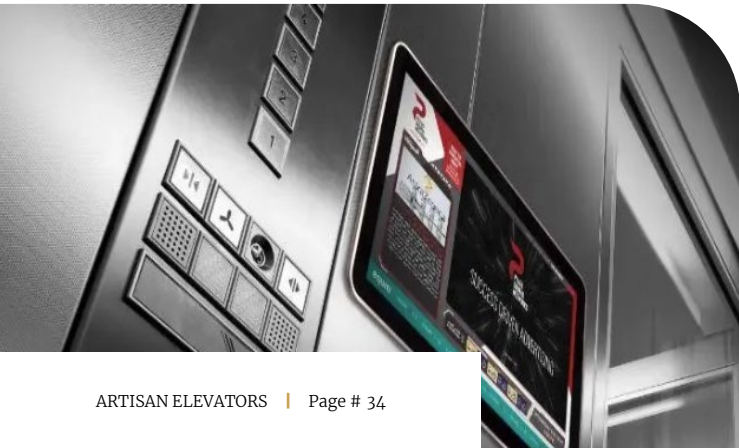

LED Lighting:

Customizable, energy-efficient LED lighting options to create a comfortable and visually appealing environment inside the cab.

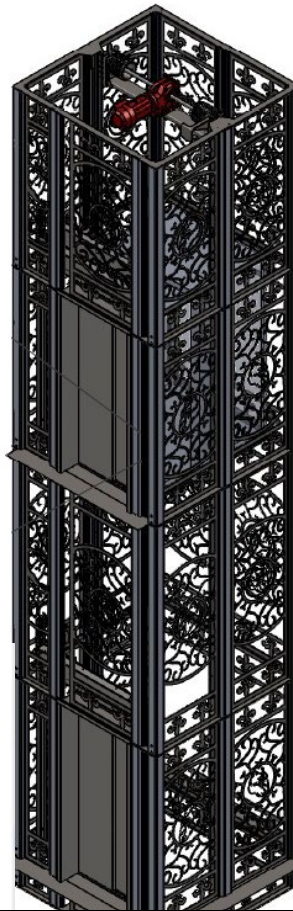

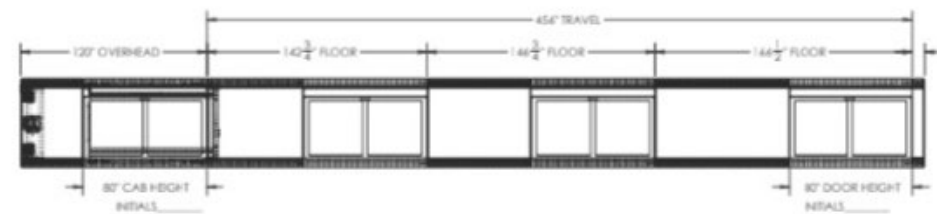

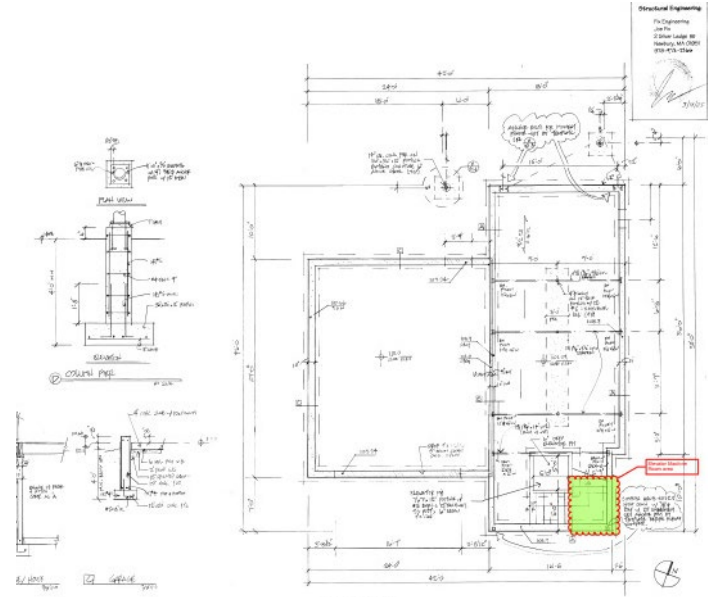

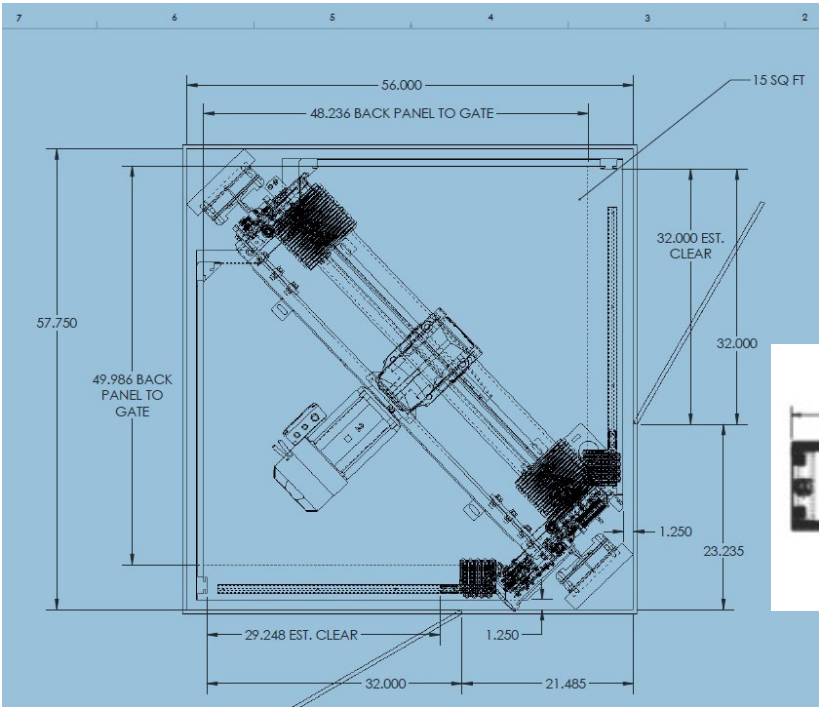

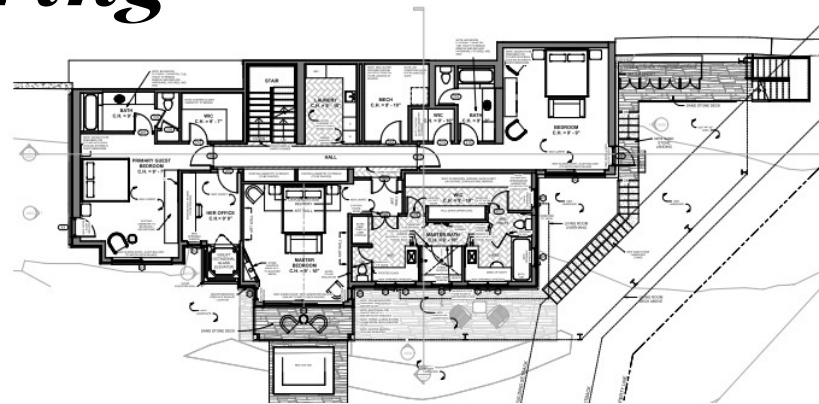

Digital Screens:

We can upgrade to interactive control panels featuring touchscreens for intuitive operation, information display, and personalized user experiences.

Architectural and Engineering Support

- Tools and resources to aid the ease of integration with existing design and nearly endless customizations .
- Professional collaboration and expertise in engineering and design .
- Direct communication with the factory without barriers. 2-D and 3-D
- CAD renderings and models.

Project of the Year

In this home, a four-level spiral staircase rises through a tall, narrow atrium extending to a cupola on the roof. The staircase fills most of the space but leaves a small, crescent-shaped sliver of space open. That space would be the setting for the most creatively designed elevator Nationwide had ever built. Nationwide proposed a completely custom, five-sided elevator design that would fit in the space between the spiral staircase and outside windows. There were multiple challenges:

- The elevator must use every inch of available space, following the contour of the windows and staircase.
- The elevator hoistway frame must be self-supporting, as there is no structural wall on which to hang rails.
- The hoistway frame must blend with the architectural elements in the home.
- The panels must be clear to complement the open atmosphere of the home.
- Entrances would be needed on both ends of the space, allowing for access at all four landings.
- The elevator cannot have a pit, as the construction of the bottom landing would not allow one.

In the process of meeting these challenges, Nationwide filed four patents and created the *“Crown Jewel”* of its Artisan Elevator line.

This elevator was honored with the *“Elevator of the Year”* award from Elevator World Magazine.
