

ENCAPSULATED BLUGUARD

Blu-Guard water features are both exceptionally safe for any venue and virtually maintenance-free. These sealed designs prevent harmful substances from entering or leaving the system, reducing the need for regular maintenance and lowering installation and operating costs.

STANDARD SINGLE PANEL

Standard Single Panel water features are available in various style options, including free-floating and curved designs, with size limitations determined by the chosen material. Some can ship pre-assembled, offering versatility for design needs.

HORIZONTAL MULTI-PANEL

Horizontal Multi Panel water features consist of multiple material pieces configured to create longer water panels, popular for their design flexibility and the ability to combine different materials for unique effects. Maximum height is determined by material size constraints, and Bluworld installation is required.

VERTICAL MULTI-PANEL

Vertical Multi-Panel water features stack material pieces to create a taller water panel, requiring Bluworld installation for precision and to prevent splashing. The maximum width typically reaches 9' to 10', and side lighting is recommended for this elegant water wall.

STACKED HORIZONTAL MULTI-PANEL

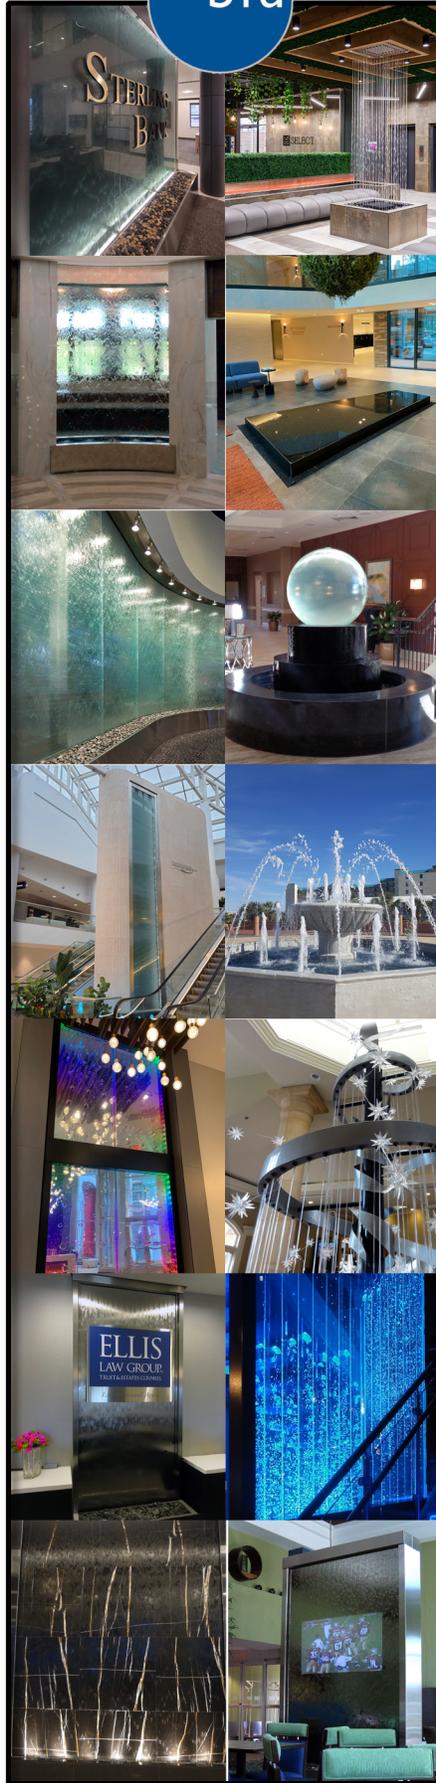

Stacked Horizontal Multi-Panel water features combine material pieces both vertically and horizontally, offering virtually limitless possibilities in terms of height and length.

WATERWALL™ SEMI-CUSTOM

The Waterwall™ is our popular, versatile product line, available in various sizes with options for frame color, water panel material, and accessories. Offering high quality and shorter lead times, they are an excellent choice for budget-conscious projects.

BUILT-IN

The Built-In Style water feature blends Bluworld's components into standard walls, creating seamless and cost-effective monolithic water walls. Typically using tile or stone as water panel materials, this construction method ensures both beauty and functionality, with underwater lighting as an effective enhancement.

RAIN CURTAIN

Bluworld's Rain Curtain waterfall features Mylar lace strands that mimic falling raindrops, offering a captivating and cost-effective water effect, especially suitable for tall spaces. The curve configuration of strands adds a unique look and feel to your waterfall, requiring less support structure.

REFLECTION POOL

A Bluworld Reflection Pool offers various water features such as ripples, concealed lighting, bubbler jets, and infinity edges. Position it against the wall for a shimmering effect, and Bluworld's self-contained construction ensures durability and simplicity in the installation process.

UNIQUE

Unique frame style water features excel in extraordinary projects due to our engineering, manufacturing, and innovation. Our commitment to research and development keeps us at the forefront of water feature design. We offer mock-up services for material, flow, and lighting testing during the design phase.

FOUNTAINS

Bluworld's Fountain Division transforms your fountain project into reality. We offer comprehensive services and equipment for traditional fountains, including design and engineering, to meet your expectations.

SCULPTURAL

Sculptural Water Features unleash creative possibilities using our advanced metal shop and craftsmanship. We work with various materials like stainless steel, copper, bronze, and more. We can create a unique sculpture for your project, produce your original design, or customize existing designs to your specifications.

BUBBLE WALLS/BLUGUARD

Bluworld's Bubble Walls, featuring sealed Blu-Guard technology, meet healthcare regulations with mesmerizing design and innovative effects. Consider equipment location and panel sizes in your planning.

iAQUA

Bluworld's iAqua™ display systems integrate video monitors into mirrored waterfalls, capturing attention with captivating visuals. Our proprietary methods ensure clear images, and in some models, when the monitor is off, the area blends seamlessly with the mirrored surface.
