

TERRA GRIP

ANCHORS

Introducing **Terra Grip Anchors** - the smarter, faster and stronger way to build. Whether you are constructing a deck, shed, fence or other structure, our patented Terra Grip Anchors offer a foundation system you can trust.

Terra Grip Anchors are ideal for both the DIY-er and professional contractors. These anchors are easy to install, without the mess, weight or complexity of traditional footings with concrete. Achieve professional-grade results with less time and effort.

Grounded in Strength

Strong

- Inspired by nature, the Terra Grips technology mimics the root system of a tree for **strong, stable anchors in any type of soil**
- Textured galvanized steel grips the soil for **superior load carry**
- Our anchor and rods system is pre-engineered for **consistent structural performance**

Simple

- Terra Grip Anchors are **easy to self-install**, even for one person
- **No digging or special tools are required** - all you need is a 1/2" impact driver or a hand wrench
- **Consistent load bearing capacity** takes out the guesswork
- Attach a universal post base to the top of the anchor for the **ultimate flexibility in lumber size being used**
- **Rock friendly** - rods will go around most hidden rocks

Sustainable

- Our concrete-free solution is **environmentally friendly with little soil disturbance or mess**
- Terra Grips can be **easily removed and/or moved** with little residual impact

Installation is Easy

Please refer to the User Manual for complete installation instructions.

Screw in the Main Anchor

Using a 1/2" impact driver or a hand wrench, easily screw the Terra Grip main anchor into the soil.

For a cleaner look, you may dig a small hole and fully recess the Terra Grip into the dirt.

Drill in the Threaded Rods

Hand thread the rod through the anchor nut, then use the impact driver to fully drill the rod into the soil. You may also screw the rods into the soil with a hand wrench.

Repeat with each rod until all four are installed.

Attach Your Post Base

The Terra Grip Anchor accommodates virtually any post base.

Simply screw on the base with a 5/8" bolt and tighten.

Your Terra Grip is now ready to use.
