Sustainable

Heat. Steam. Cool. Done.

Thermal modification is a chemical-free process that gives you the beauty of real wood, naturally enhanced with only heat and steam for unequalled strength and stability—even in changing weather conditions. And, with greater insulating properties compared to unmodified wood, our wood is never too hot on your feet.

The right wood. The right way.

We source all our wood using responsible forestry practices, never laying a finger on our tropical woodlands and rainforests. And wood is the only naturally renewable building material that doesn't generate hazardous waste. So, when you choose Thermory, you're not just investing in quality, but in the health of our planet too.
