FOR IMMEDIATE RELEASE

**LDCWOOD® EXPANDS THERMOWOOD® FOOTPRINT IN NORTH AMERICA,
EXHIBITING AT THE INTERNATIONAL BUILDERS' SHOW**

The innovative producer of thermally modified wood is committed to delivering sustainable wood products in partnership with BPWood. Visit booth C2649.

PENTICTON, BRITISH COLUMBIA. February 12, 2025—LDCwood, the Belgian manufacturer of ThermoWood, a thermally modified wood product, is expanding its footprint in North America. LDCwood will exhibit with its North American partner, BPWood, at the International Builders' Show from February 25 to 27, 2025, at the Las Vegas Convention Center, central hall, booth C2649.

LDCwood products are sustainably sourced and manufactured using the innovative ThermoWood thermal modification process, the oldest and most reputable method of wood thermal modification, governed by the International ThermoWood Association (ITWA). This process transforms wood into stable, durable finished

products that can withstand even the harshest environments. BPWood, a global partner and importer of sustainable wood products, is the exclusive supplier for North American distribution.

“We are thrilled to showcase LDCwood at the most important industry show in the world,” said Paul Bouchard, founder and CEO of BPWood. “As traditional lumber

-more-

supplies become increasingly restricted, LDCwood ThermoWood ensures the market can access innovative and sustainable solutions. It meets the demand for high-quality, durable wood products in construction and beyond.”

LDCwood products are currently available at OrePac, Edmund Allen, and Westwood Lumber Sales, with ongoing expansion to ensure widespread coverage across North America.

Suitable for various exterior and interior applications, LDCwood products can be used for decking, siding, louvers, soffits, pergolas, and more. They are available in multiple species and are easy to machine, coat, and glue.

For more information, visit the LDCwood booth (C2649) at the International Builders’ Show.

About LDCwood

LDCwood® is a Belgian producer of ThermoWood®, thermally modified timber. We provide a solution for every need with a range of wood types, patterns, finishes and fire retarded treatments with Burnblock®. As a member of the International ThermoWood® Association we provide the highest quality of ThermoWood® in the market. All LDCwood® species are available certified (FSC®, PEFC or OLB), with a transparent chain of custody, contributing positively to sustainability goals.

About BPWood

BPWood Ltd. is known worldwide as The Nimble Innovators®. From tree to finished product, BPWood delivers sustainable supply chains on the periphery of pure commodity global wood product markets. Collaborating as principals with manufacturers, importers, and distributors, BPWood offers expertise in optimal product specifications and valuable alternative product proposals and analysis. Navigating the complexities of global trade, your BPWood team facilitates efficient and professional supply for your enterprise. Bring us your toughest puzzle; we’ll help you solve it.
