Embers Protection Services' Innovative Wildfire Defense System Proves Successful in Recent Fires, Heads to NAHB Show

MALIBU, CA (February, 2025) – Embers Protection Services (EPS), the industry leader in automated wildfire defense systems, announces its participation in the upcoming NAHB International Builders Show in Las Vegas (February 25-27, 2025), following remarkable success in protecting properties during recent California wildfires.

The company's patented autonomous wildfire defense system (U.S. Patent #11247087) recently demonstrated its effectiveness during the Franklin and Palisades fires, successfully protecting properties in Malibu and Pacific Palisades. This real-world validation showcases the system's capability to defend high-value properties through its innovative dual-defense approach.

"Our system's success in protecting homes during recent wildfires proves that proactive defense technology isn't just innovative – it's essential," says Christopher McDonald, owner of Embers Protection Services.

The EPS system stands out for its comprehensive approach to wildfire defense, featuring:

- **24/7 real-time monitoring and autonomous activation**
- **Dual defense system with perimeter fire retardant deployment and structure protection**
- **Smart technology integration with satellite data tracking, heat sensors, and video surveillance**
- **Early warning detection system with automated email and text alerts**
- **Constant pressure water systems with backup power**
- **Customized protection strategy for each individual property**

In addition to its protective capabilities, EPS installations are increasingly recognized by insurance carriers, with many homeowners potentially receiving premium discounts and maintaining coverage in high-risk areas where others face cancellation. This financial benefit adds to the system's value proposition, offering both protection and potential cost savings.

"As insurance companies tighten restrictions in wildfire-prone areas, our system provides a solution that helps homeowners maintain their coverage while potentially reducing their premiums," McDonald adds. "It's a win-win situation that combines peace of mind with financial benefits."

About Embers Protection Services

Embers Protection Services provides cutting-edge, automated wildfire defense systems that protect properties 24/7 without human intervention. The company's patented technology includes perimeter defense with eco-friendly fire retardant and structure defense using high-pressure water systems, all monitored through an advanced digital portal.
