## ***MONO SLAB® EZ FORM: ONE STEP TO A BETTER FOUNDATION***

Mono Slab® EZ Form is a patented forming system that transforms the way slab-on-grade foundations are built. By combining forming, insulation, and backfilling into a single pre-pour step, Mono Slab® cuts labor, saves materials, and speeds up projects—all while meeting frost-depth and energy code requirements.

## ***BUILD FASTER, WORK SMARTER***

Say goodbye to complicated multi-step setups. Mono Slab® EZ Form eliminates separate forming and bracing, streamlining installation so you can move from prep to pour in record time.

## ***SAVE BIG WITHOUT CUTTING CORNERS***

Lower excavation costs, reduce waste, and stretch your budget further—without sacrificing durability or performance.

## ***CODE-READY, CLIMATE-TOUGH***

Built to meet IRC, IBC, and IECC standards in all 50 states, this system offers reliable frost protection and energy efficiency in any climate zone.

## ***EFFICIENCY THAT PAYS OFF***

Continuous insulation and a built-in thermal break keep heat where it belongs, lowering energy costs for the lifetime of the building.

## ***FROM GARAGES TO DREAM HOMES***

Perfect for residential, commercial, and light-industrial projects, Mono Slab® EZ Form is as versatile as it is effective—ideal for garages, shops, and energy-efficient homes.

# INSTALLATION INSTRUCTIONS

**1**

Excavate to plus or minus 1/2 inch.

**2**

Beginning at a corner, place the first Mono Slab® EZ Form.

**3**

Place the next Mono Slab® EZ Form, butting it in firm contact with the previous form.

**4**

Connect Mono Slab® EZ Form with a 2x12x8', staggering the seams, then place two stakes per 8' length.

**5**

Lightly backfill the exterior of the slab.

**6**

Starting at the highest point in the foundation, lift the screed board (2x12x8') to perfect level.

**7**

Secure screed boards with Level Up Extension Brackets.

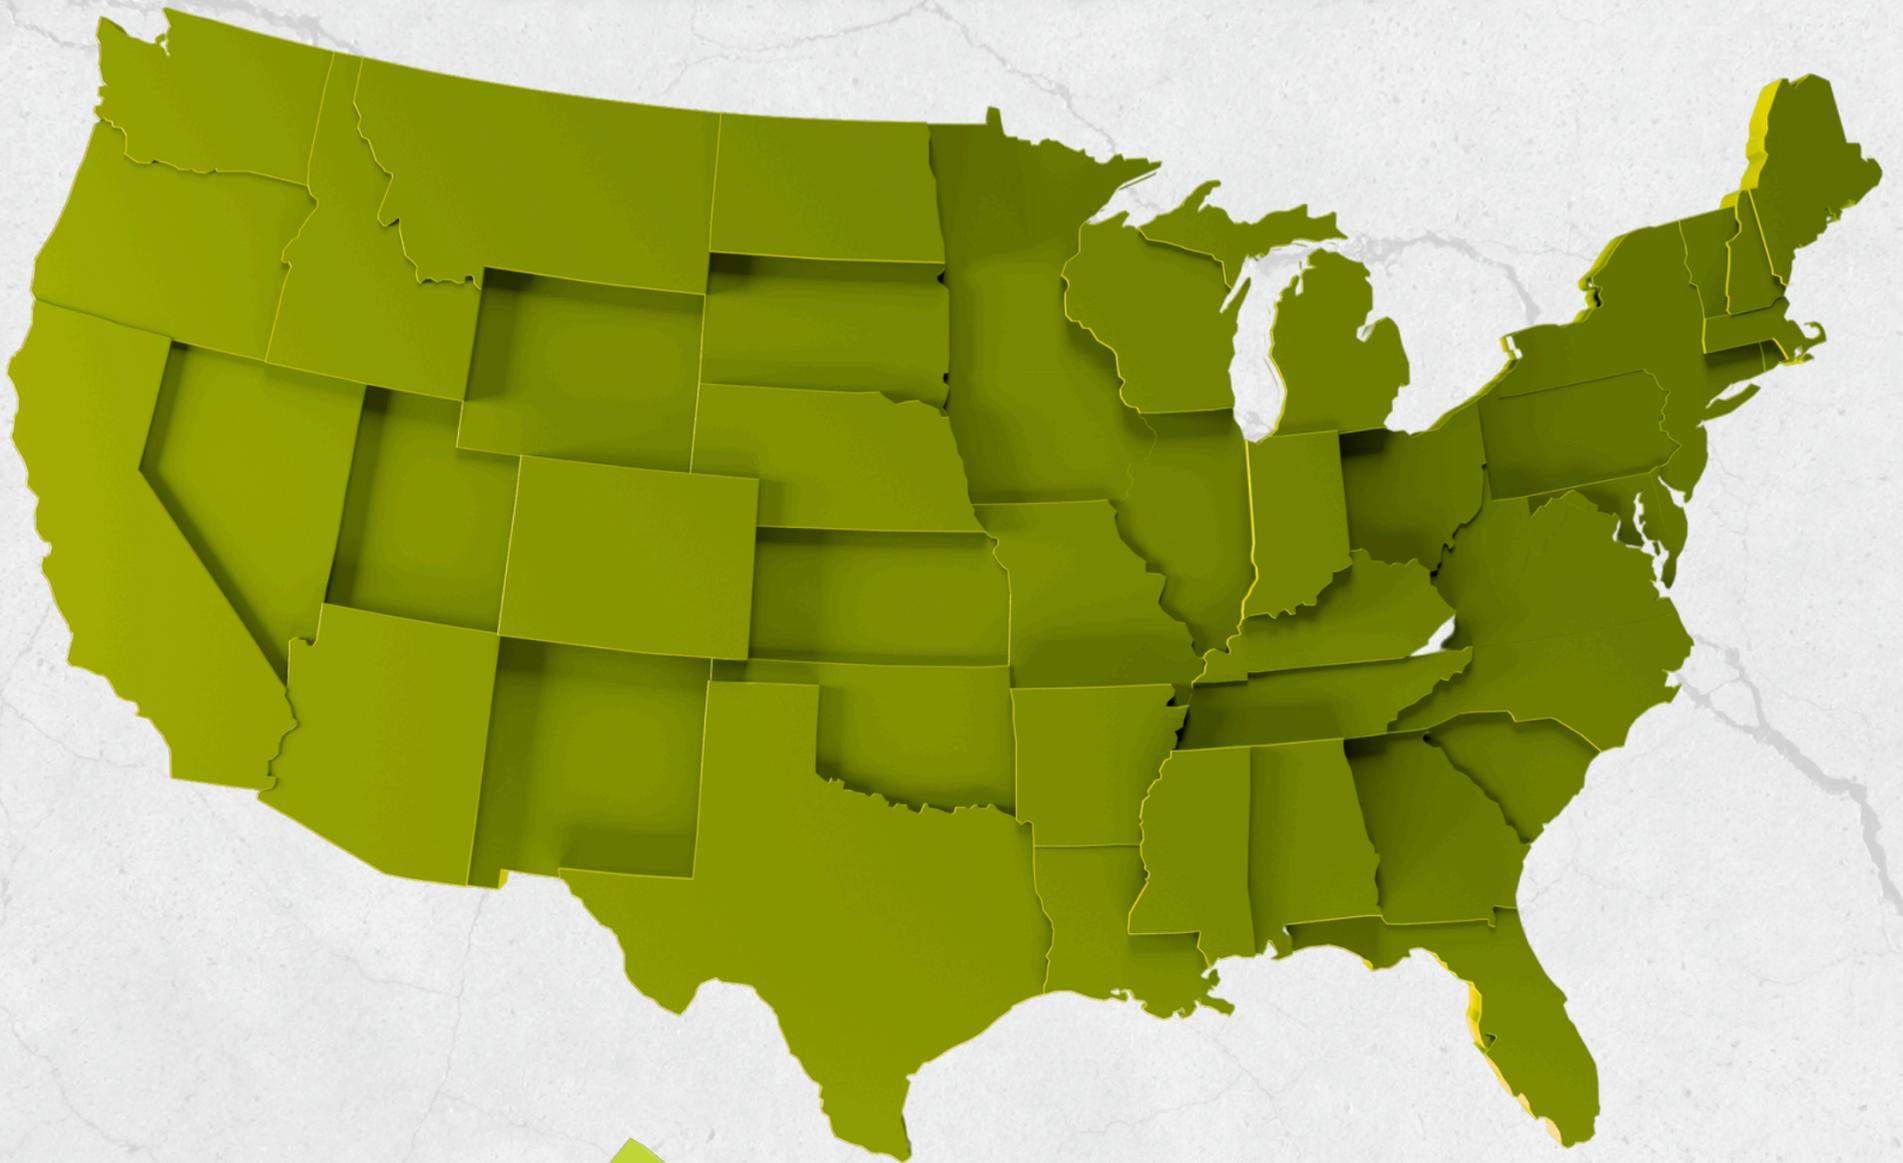

**8**

At intersections, fasten butt joints, and backfill.
