LENNOX INNOVATIONS FOR 2015

Lennox Ultimate Comfort™ System
Lennox Industries is proud to introduce the Ultimate Comfort™ System, the most advanced and efficient heating, air conditioning and indoor air quality system ever created. Led by the new XC25 air conditioner and the new iHarmony® zoning system, Lennox offers a complete system that allows homeowners to achieve customized comfort and control.

Lennox XC25 High-Efficiency Air Conditioning System
Lennox boasts the most precise and efficient air conditioner on the market with the new XC25, which has an industry-leading cooling efficiency of 26 SEER (Seasonal Energy Efficiency Rating), and is equipped with SilentComfort™ technology that keeps sound levels to a minimum. The XC25 is an eco-friendly and ENERGY STAR® “Most Efficient” qualified air conditioner, with cooling outputs that can be changed in increments of just one percent, providing energy savings and comfort.

Lennox iHarmony Zoning System

For ultimate control, the new iHarmony zoning system solves the problem of uneven or uncomfortable temperatures throughout a home, and reduces homeowners’ energy costs. The iHarmony directs air to specific areas in the home, while decreasing the airflow in others, by using motorized dampers that allow homeowners to change the temperature throughout the entire house or only in particular areas.

The iHarmony zoning system can also be configured with the iComfort S30 thermostat and controlled by an iPhone, iPad, or Android device, putting precise comfort at homeowners’ fingertips. Plus, each specific “zone” can have a unique seven day program, which helps homeowners save money on their energy bills by not wasting unnecessary heating and cooling on infrequently used parts of the home.

Completely Customized Home Comfort

With the new XC25 air conditioner and the new iHarmony zoning system working together, along with the programmable, remotely accessible iComfort S30 smart thermostat; SLP98V furnace (98.2%
efficiency rating); and PureAir™ whole-home air purification system, Lennox has created a system that redefines precision, consistency, and comfort for homeowners.

About Lennox Industries
Lennox Industries is a leading provider of customized home heating, cooling and indoor air quality products that are designed to deliver customized comfort, efficiency and functionality, with the most innovative and reliable features available. Lennox has been honored four times by the U.S. Environmental Protection Agency and the Department of Energy as an ENERGY STAR Manufacturing Partner of the Year for its outstanding contribution to developing and promoting energy-efficient products. ###
LENNOX iCOMFORT S30
Smart Thermostat

ABOUT:

The new Lennox iComfort® S30 smart thermostat doesn’t just control temperatures. It learns lifestyles by adapting and anticipating what homeowners want their home temperature to feel like. It is an advanced yet simple to use comfort control that’s perfect for every home and lifestyle, giving homeowners an unmatched level of control over their indoor comfort.

The iComfort S30 is designed to integrate into homeowners’ lives like nothing before. iComfort® S30 offers various features that make the system truly unique to each homeowner and their location. The default screensaver for the system will correspond directly to local weather. Homeowners can also upload their own personal photo to use as a screensaver on the device.
KEY FEATURES AND BENEFITS

✓ **Smart Schedule:** Optimizes smart energy use by learning a family’s routine, observing when the house is empty, when family members sleep and when they go to work and adjusting heating and cooling schedules accordingly.

✓ **Breathe Easy:** Monitors air quality and pollen levels in a homeowner’s zip code and automatically runs the fan more on days with “dirty air” to increase filtration.

✓ **Feels Like:** A homeowner can adjust one setting and the thermostat changes multiple factors to create optimized comfort levels.

✓ **Homeowner App:** Technology and energy savings at your fingertips. The iComfort® S30 allows homeowners to adjust nearly any setting on their thermostat remotely on their mobile device.

✓ **Geofencing Technology:** Advanced geo-fencing technology regulates heating and cooling levels based on a homeowner’s geographic location in relation to the home, through macro-targeted location-based mobile technology.

###
LENNOX XC25 HIGH-EFFICIENCY AIR CONDITIONING SYSTEM

Lennox Industries has introduced the XC25 air conditioning system, which features an industry-leading cooling efficiency of 26 SEER (Seasonal Energy Efficiency Rating), and is the most precise and efficient air conditioner on the market.

The XC25 is installed with the iComfort S30® thermostat, which maximizes energy efficiency and will save homeowners hundreds of dollars each year on utility bills.

Key Features and Benefits of the XC25

- Precise Comfort™ technology allows homeowners to adjust the XC25 output in increments of just one percent, enabling a home to maintain a consistent temperature at all times.

- For year-round savings, the XC25 can be combined with SunSource solar modules, allowing a homeowner to use energy from the sun to reduce cooling bills by up to half.

- The XC25 offers the lowest operating noise levels of any air conditioning system available thanks to SilentComfort™ technology, which makes the XC25 twice as quiet as a standard air conditioner.

- The XC25 is also able to modify its output based on the area of the country in which a homeowner lives using Climate IQ™ technology. In warmer climates, the XC25 adjusts its airspeed to allow for greater humidity control, while in cooler climates, the system’s startup is slower to allow for the air to absorb more heat before circulation.

Centered on the XC25 air conditioning system, Lennox has created the Ultimate Comfort™ System, the most advanced and efficient heating, air conditioning, and indoor air quality system ever created. Homeowners can now achieve customized comfort and control with a system that redefines precision, consistency, and convenience.

###
LENNOX XP25 HIGH-EFFICIENCY HEAT PUMP

Lennox Industries has introduced the XP25 heat pump, which features an industry-leading cooling efficiency of 23.5 SEER (Seasonal Energy Efficiency Rating) and a HSPF (Heating Seasonal Performance Factor) rating of 10.20, making it the most precise and efficient heat pump on the market.

The XP25 is installed with the iComfort S30® thermostat, which maximizes energy efficiency and will save homeowners hundreds of dollars each year on utility bills.

Key Features and Benefits of the XP25

- Precise Comfort™ technology allows homeowners to adjust the XP25 cooling output in increments of just one percent, enabling a home to maintain a consistent temperature at all times.

- For year-round savings, the XP25 can be combined with SunSource solar modules, allowing a homeowner to use energy from the sun to reduce cooling bills by up to half.

- The XP25 offers extremely low operating noise levels thanks to SilentComfort™ technology, which makes the XP25 twice as quiet as a standard heat pump.

- The XP25 is also able to modify its output based on the area of the country in which a homeowner lives using Climate IQ™ technology. In warmer climates, the XP25 adjusts its airspeed to allow for greater humidity control, while in cooler climates, the system’s startup is slower to allow for the air to absorb more heat before circulation.

Centered on the XP25 heat pump, Lennox has created the Ultimate Comfort™ System, the most advanced and efficient heating, air conditioning, and indoor air quality system ever created. Homeowners can now achieve customized comfort and control with a system that redefines precision, consistency and convenience.

HOW THE LENNOX SUNSOURCE™ HOME ENERGY SYSTEM WORKS

How It Works:

Roof-mounted solar modules harness clean, sustainable energy from the sun and use it to run the home’s central heating and cooling system. When the system is not operating, the solar energy is supplied to other devices that consume electricity, such as lighting and appliances.

Once the system is fully set up, homeowners can expect to see a reduction in their utility costs. Down the line, if they want to see their bills lowered even more, they can expand on the system by adding additional solar modules – up to a total of 15 roof-mounted modules per outdoor unit.

If the patent pending SunSource Home Energy System generates more power than is used by the home, that power will be sent back to the utility company, possibly entitling the homeowner to a credit on their utility bill.
The Online Communications Module:

A communications module included with the SunSource Home Energy System allows homeowners to monitor energy production and environmental benefits online in real time, as illustrated below:

Lennox iHarmony Zoning System

Lennox Industries has introduced the iHarmony™ zoning system, which allows homeowners to achieve precise comfort control in up to four areas of the home, solving the problem of uneven or uncomfortable temperatures throughout living areas.

Installed with the iComfort S30® thermostat, the iHarmony zoning system maximizes energy efficiency by restricting heating and cooling to seldom used rooms and directing it where it is needed, helping homeowners save money on utility bills.

Key Features and Benefits of the iHarmony Zoning System

- Up to four areas in the home, known as “zones,” have thermostats to monitor and adjust the temperature in the specific room, creating precise home comfort control.

- Each “in-zone thermostat” features a modern and streamlined design, and has an attractive, low-profile look that is compatible with any room décor.

- With just a few taps on the iComfort S30 – or any Web-enabled device, including a smartphone – the iHarmony system can manage each living area anytime, from anywhere. The temperature in a specific zone also can be changed with just a touch or two to the specific in-zone thermostat as well.

- Using the iHarmony zoning technology can reduce homeowner’s energy costs up to 35 percent by eliminating unnecessary heating and cooling in low-trafficked areas of the home.

- The iHarmony system allows each of the four zones to program a different schedule for every day of the week, offering an unparalleled level of customized home comfort control.

The directed airflow and consistent temperature delivery of the iHarmony zoning system has been paired with other recent Lennox innovations to offer homeowners the Ultimate Comfort™ System, the most advanced and efficient heating, air conditioning, and indoor air quality system ever created. Homeowners can now achieve customized comfort and control with a system that redefines precision, consistency and convenience.
