JELD-WEN Strengthens Siteline® Product Family with Multi-Slide Patio Doors

CHARLOTTE, N.C. — Consumer preference for naturally lit interiors and large patio door systems continues to grow. To address this market demand, JELD-WEN has added the Siteline® Multi-Slide patio door to its Siteline® product family.

Brand new for 2020, the Siteline® Multi-Slide patio door utilizes a LaCantina™-proven narrow, three-inch stile and rail to increase the amount of glass and natural light entering the home while minimizing vertical obstructions when looking through a closed door to the exterior.

This latest addition allows customers to purchase everything they could possibly need, all from the Siteline® product family.

The Siteline® Multi-Slide door is designed to create large patio door openings that seamlessly combine interior and exterior spaces. Panels are available in sizes up to 60 inches wide by 108 inches tall and can be configured up to six panels in a single direction or 12 panels in a bi-parting configuration, which delivers a maximum net frame width of a little over 57 feet.

With panels available down to 30 inches wide by 36 inches tall, this product can also be used as a window system to create large pass-through openings for indoor/outdoor bars or kitchen areas.

Siteline® Multi-Slide is available in stacking configurations, with one fixed panel on either end and multiple operable panels that can stack behind them. In pocketing configurations where there’s an interior wall cavity, panels can be pushed to the side and stacked completely out of sight.
“If you look at the quality, performance, and price, this product delivers unmatched value,” said Tim Kelting, director of product line management with JELD-WEN, “which aligns perfectly with the Siteline® product line as a whole.”

The Siteline® Multi-Slide door panels have a wood interior with a laminated, veneered lumber substrate and an extruded aluminum exterior. The product comes in a range of finish options to complement the Siteline® window line, including Auralast® Pine — the worry-free wood®. It’s also available with large horizontally retractable screen options to provide insect protection.

This unique patio door system is offered with multiple threshold options. Available options include weather-resistant thresholds for varying degrees of weather exposure, an ADA-compliant ramp threshold, and a flush threshold for covered openings where a seamless transition is desired.

The Siteline® Multi-Slide patio door is available now through your local JELD-WEN dealer. Visit jeld-wen.com for more information.

###

JELD-WEN, founded in 1960, is one of the world’s largest door and window manufacturers, operating manufacturing facilities in 20 countries located primarily in North America, Europe and Australia. Headquartered in Charlotte, North Carolina, JELD-WEN designs, produces and distributes an extensive range of interior and exterior doors; wood, vinyl and aluminum windows; and related products for use in the new construction and repair and remodeling of residential homes and nonresidential buildings. JELD-WEN is a recognized leader in manufacturing energy-efficient products and has been an ENERGY STAR® Partner since 1998.
