

Broan-NuTone Premieres Slim 2.1 at the 2024 International Builders Show

Residential ventilation industry leader excels in indoor air quality with new updates to the fresh air systems ventilation Broan AI Series.

Las Vegas (February 27, 2024) – Today, Broan-NuTone® unveils the Slim 2.1, the latest fresh air system update in their AI Series. The Slim 2.1 stands out as the most adaptable and cutting-edge fresh air system in the industry. Engineered to simplify design, specification, and installation tasks while ensuring superior air quality within a compact framework, this system boasts the fastest installation in its class, saving 20 minutes on installation time courtesy of its auto-balancing and self-adjusting VIRTUO™ technology.

VIRTUO is the first AI technology designed exclusively for ventilation systems. It delivers superior air quality year-round, in all weather conditions. By continually monitoring indoor and outdoor conditions, VIRTUO adjusts the operating mode automatically to deliver the optimal amount of fresh air for a comfortable indoor environment, all with minimal energy consumption.

“In addition to optimal performance, our AI Series, including the Slim 2.1, can help builders earn tax incentives with code-compliant solutions that help meet requirements,” said Assistant Director of Marketing Dave Jones. “There’s close alignment between reference home infiltration rates in the ENERGY STAR® certified new home program and the 2021 IECC and we have both the expertise and product solutions to help you reach these technical requirements.”

The Slim 2.1 can swap airflow direction with the flip of an integrated selection switch, removing the need to specify various models to accommodate mirrored floor plans and ensuring simplicity throughout both the design and installation phases. Its horizontal and wall mount options provide location flexibility to accommodate various application needs. Additionally, this fresh air system features an integrated LCD screen offering real-time values for CFM through intuitive CFM selection in 1 CFM increments and contains a fault indicator display (FID) that promptly responds to filter maintenance, airflow, watt usage and system sensors.

This product is also equipped with PMSM ECM motors for reliable and energy-efficient operation. These powerful and durable motors provide up to 60% energy savings compared to competitive units.

The Slim 2.1 and other Broan-NuTone product offerings can be found in booth #C6715 during the International Builders Show at the Las Vegas Convention Center. For more information on Broan-NuTone and its entire selection of products and solutions, please visit <https://www.broan-nutone.com/>.
