Manufactured by G.E.M. Inc.

YOUR SHIELD FROM THE ELEMENTS

Hail, Heat, Wind, Rain & Snow...
Bring it on.

Your EUROSHIELD® rubber roof has
you covered in style.

EUROSHIELD® Rubber Roofing products were
created over 20 years ago with the goal of
diverting and recycling the tremendous deluge
of used tires ultimately destined for landfill.
Years of research and development led to the
creation of a unique formula, containing 70%
recycled tire rubber and approximately 95%
recycled content, for the production of the
finest rubber roofing products available on
the market today.

EUROSHIELD® manufactures 2 Slate profiles...
Rundle Slate and Vermont Slate.

And...

EUROSHIELD® manufactures 2 Shake profiles...
Ranchlands Shake, and Beaumont Shake.

Between 250 to 1,000 or more tires are used in
the production of a single EUROSHIELD® roof for
replacement or new construction applications.
Scrap material generated during both the
manufacturing and installation process can
be collected and recycled again - virtually
eliminating environmentally harmful waste.

Beaumont Shake in Driftwood

HAIL PROOF ROOF*

Vermont Slate HP is warrantied Hail Proof for any size hail for
the first 20 years, followed by 30 additional years of 2" hail
damage warranty coverage.

EUROSHIELD® roof panels are warrantied against
perforation or tear-through damage from hail 2" or less
in diameter.

See Warranty for Details.*

Rundle Slate
in Black

Ranchlands Shake in Brown

All EUROSHIELD® styles feature our unique
interlocking "tongue and groove" panel system that
provides superior wind performance. Rundle Slate
and Ranchlands Shake present a thicker profile (3/4"
at the butt edge) and weigh approximately 3.4 lbs
per square foot, light enough for any standard roofing
application without the need for added truss supports.
Beaumont Shake and Vermont Slate offer the same
great looks and performance in a thinner profile,
approximately 1/2" at the butt edge, at a much lower
cost, typically between asphalt shingles and other
premium metal, cedar and plastic composites.
