

SLATE LITE

the future of stone.

Real stone, thin & flexible 
Piedra real, fina y flexible 

DIN EN 15102:2011-12
DIN EN 15102:2008+A1:2011

THE INNOVATION

 *Slate-Lite* is created with a revolutionary method from some of the world's most beautiful stone blocks.

We invented a method to attain many very thin stone slabs from these massive blocks. Each sheet is one of a kind, which is manufactured by hand in more than 12 processing steps. Despite its lightness, it retains the feel and visual appearance of a solid stone slab.

Slate-Lite is only about 1,5 mm thin and therefore extremely light and even flexible!

LA INNOVACION

 *Slate-Lite* se obtiene por un método revolucionario de los bloques de piedra más bellos del mundo.

Hemos desarrollado un proceso especial que permite deslaminar finísimas láminas de los bloques macizos. Cada una de estas placas es única y se produce en más de 12 pasos de procesamiento. A pesar de la ligereza, conserva la sensación y el aspecto de una enorme losa de piedra.

¡*Slate-Lite* tiene solo 1,5 mm de grosor e incluso flexible!

TRANSLUCENT

TRANSLUCENT
TRANSLÚCIDO

 *Slate-Lite* is an extremely thin real stone veneer with a fiberglass backing and a 100% natural stone surface. The material is despite its lightness and an overall thickness of just approx. 1,5 mm extremely robust.

UltraThin eco+ is a paperthin, super flexible real stone veneer with a cotton backing. The backing makes it really easy to cut and allows all new possibilities in producing furniture or process complex shapes and corners.

Translucent is an extremely thin and flexible real stone veneer. Due to its translucent backing a light source behind the sheets will create a unique backlit pattern and allows you to create amazing illuminated objects made out of real stone.

 *Slate-Lite* es una lámina de piedra natural extremadamente delgada con un soporte de fibra de vidrio y una superficie de piedra 100% natural. A pesar de su ligereza y un grosor total de aprox. 1.5 mm solamente, es extremadamente robusto y duradero.

UltraThin eco+ es una finísima lámina de piedra natural, moldeable en 3D con un soporte de malla de algodón. Se puede cortar incluso con tijeras y permite formas completamente nuevas en la producción de muebles o la colocación de formas y esquinas complejas.

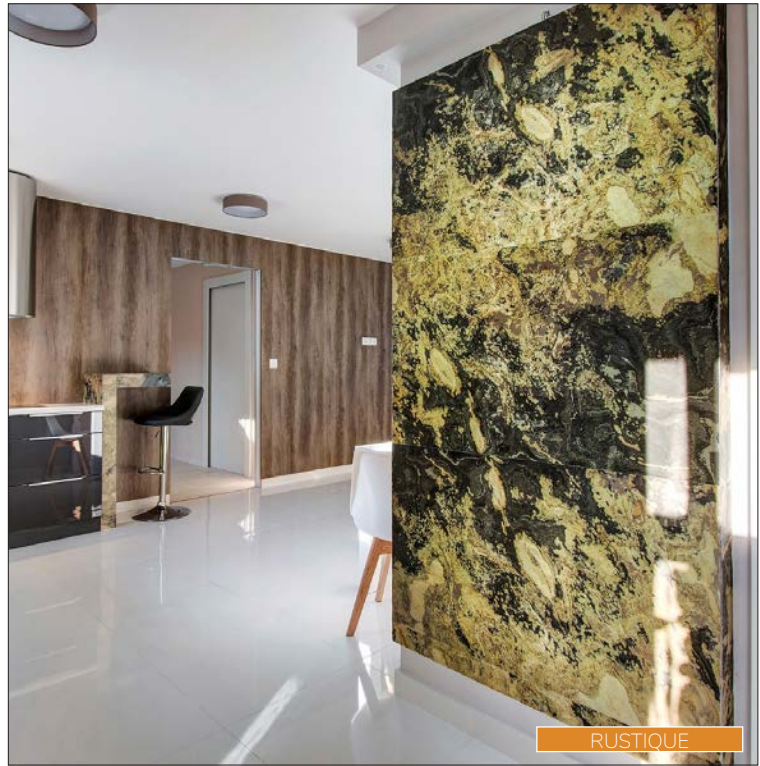

Translucent es una lámina de piedra natural extremadamente delgada con una parte posterior transparente. Colocando una fuente de luz detrás de la piedra, se crean patrones únicos que garantizan objetos luminosos excepcionales hechos con piedra natural.
