

DMSi Frameworks

Web-based inventory & order management ERP software for LBM dealers.

One System for Your Entire Operation:

Retail POS
Contractor Sales
Dispatch
Inventory Control
Purchasing
Accounting & Reporting
Integrations & APIs
Mobile-Friendly

THE COMPETITIVE EDGE FOR LBM DEALERS

One Complete ERP

Point of sale, pro desk/contractor sales, inventory control, accounting, and reporting.

Built for Dealers

All the features you need and nothing you don't.

100% Web Based

Access from any device using a web browser.

DMSi.com | 402-330-6620

Retail POS

Streamlined Point of Sale is optimized for fast transactions. The user-friendly interface is easy to learn, so even new hires can quickly get customers on their way. Create rewards programs to grow repeat business and thank loyal customers.

Contractor Sales

Manage complex, multi-job projects from start to finish, including order/quote entry, contract pricing, and linked purchasing all the way to picking, dispatch, and invoicing. Track the entire project from one place with a customizable dashboard.

Inventory Control

Reduce product confusion and mistakes. Frameworks gives you visibility into your inventory even across hundreds of thousands of items. Users can manage inventory in real-time across one, some, or all branches.

Purchasing

Protect your margins with advanced pricing controls and the ability to handle complex structures, including repricing, special buys, supplier rebates, and contract pricing. Make smarter buys with purchasing recommendations and branch transfers.

Accounting & Reporting

Fully integrated financials (A/R, A/P, G/L) are user-friendly, yet robust enough to handle multi-company organizations. Simplify research with point-and-click drill-downs and reports.

Integrations

Integrate with other systems such as ecommerce, manufacturing packages, business intelligence platforms, and more!

Geoff Dahlsen

CEO, Dahlsens Building Center

"Frameworks is not only intuitive to use but also makes our business data easy to access. It allows us to deliver exceptional customer service while managing KPIs to ensure my business profitability."

DMSi Frameworks

How Frameworks came to DMSi

Since 1976, DMSi has focused on software that meets the specific needs of our customers. Our mission to deliver purpose-built software for the building materials industry is what brought us to Frameworks.

We discovered Frameworks at a software conference. A mutual technology partner suggested we meet the team from Sterland Software: an Australian ERP company also focused on the building materials industry.

As we began sharing experiences, insights, and ideas, we discovered that Sterland's approach to helping customers mirrored our own: provide good service, build good software, and put customers first. We were also struck by the similarities between Australian and American dealers. They handle the same materials, manage the same processes, and serve the same types of customers.

As we learned more about Sterland and their customers, we also learned more about Frameworks, Sterland's ERP system. Three facts particularly impressed us:

1. Frameworks is purpose-built for dealers, and customers drive its roadmap.
2. Frameworks is 100% on the web.
3. Dealers across Australia, from small retailers to nationwide contractor yards, are thriving on the software.

Nearing retirement, Sterland's owners approached DMSi about acquiring the company. Knowing Frameworks would be a great solution for American dealers, we agreed.

Acquiring Sterland, however, was only the first step. We spent the next two years reviewing every inch of Frameworks and adapting it for American dealers, from units of measurement and tax rules to menu titles and training documentation.

Now, as one DMSi family, our Australian and American teams work together to continue to improve and advance Frameworks in ways that benefit dealers of any nationality.
