REMEDATION BOMB PRO

Superstratum Remediation Bomb Pro is a dry packet that releases controlled amounts of chlorine dioxide gas simply by adding water. Use to eliminate the odors from mold, mildew, smoke, pet urine, cannabis, and other VOCs.

Controlled-Release Chlorine Dioxide Gas

The properties of chlorine dioxide gas (CLO₂) against microbial odor was discovered in 1814. However, due to the unstable properties of the gas, there has not been an effective and dependable method to use and store CLO₂.

Superstratum Remediation Bomb utilizes a brand new patented **controlled-release CLO₂ gas technology**. By simply adding water, the perfect amount of CLO₂ gas is released into an environment to purify the air.

Use to remove odors caused by:

Smoke | Urine | VOCs | Mold | Mildew | Bacteria

Additional Uses:

Cars | Boats | Campers | Storage | Freezers | Kitchens

The Superstratum Remediation Bomb Pro is part of the full Superstratum System; a comprehensive solution for eliminating mold and destroying mycotoxins that is water-resistant and guaranteed to last for years.
