

Ahead of the Curve

FV41 Arch FullView Arched Fireplace

Innovations

Until now, the most common way of creating the look of an arched hearth was to install an arched front or doors over a rectangular firebox. But no matter how stylish or well done, there's no getting around the visible black area that appears in the gap between the firebox edge and the top of the curved front. With the new FullView Arch design, Mendota delivers a truly arched aesthetic in a shape and size that's ideal for most any residential or commercial setting.

As visible glass and viewing areas become increasingly important purchase considerations, the FullView Arch maximizes both without increasing the overall installation footprint. Compared to the regular FullView 41 model, the Arch model offers an increase of nearly 60 sq. in. of viewing area, with 833 sq. in. of glass as compared to 774 sq. in. on the non-arched model. That means a better view of the fire, from virtually any angle.

For years, cleverly designed fronts and doors have created the illusion of an arched profile for the hearth, but truly arched fireplaces have been few and far between, typically developed as specialty fireplaces with more limited applications. Now, Mendota's new FullView 41 Arch brings the elegance and sophistication of the arched design to a broader audience.

Building on the hugely popular FullView fireplace platform, the FV41 Arch continues the FullView series' clean-face point of view, with minimal exposed metal and no telltale louvers or raised platform. But instead of a rectangular firebox, the arched glass of the new FV41 Arch makes the already expansive viewing area feel even larger—ultimately offering a better view of the award-winning Mendota fire.

The interior linings have been re-engineered to complement the arched design, so while the options remain the same Red Soldier Course Brick and Black Porcelain Reflective as what's available for non-arched FullView models, the end result looks sleek and integrated. Mendota plans to launch additional arched interior lining options in the near future.

Because this model is identically sized to FullView 41 models, all arched fronts currently available for that model will fit perfectly on the new FV41 Arch. Selections include Wide and Narrow Grace Arch, Traditions Arch, Willowbrook Arch and Bentley doors, each one available in up to five distinctive finishes that let homeowners create a focal point that's perfectly suited to the surrounding room.

Performance of the new FV41 Arch model is in keeping with Mendota's rigorous standards. Heat output of 40,000 BTUH plus an impressive CSA P.4 efficiency rating of 77.18% is paired with the Mendota BurnGreen™ burner that gives homeowners choices for conserving fuel and helping the environment.

A New Take on an Old Favorite

FV34 FullView Fireplace

Innovations

Finding the right size fireplace for a space, in terms of both aesthetics as well as heat output, is essential to ensure long-term comfort for any home or business. With the addition of the FullView 34, Mendota delivers today's clean-face styling in a size that's been proven over more than two decades. Now, dealers have a complete set of solutions at their fingertips to fit various sizes and shapes of rooms.

Typically, that also means carrying additional inventory to accommodate the many fronts, doors and decorative options available—but that's not the case with the FV34. It was intentionally engineered to the same size specifications as previous Mendota models, so existing fronts fit perfectly. That puts consumers in complete control of design elements without adding unnecessary SKUs to dealer stockrooms.

When looking to expand the wildly successful FullView fireplace series, Mendota drew inspiration from the past. For more than 20 years, the DXV35 has been one of Mendota's most popular fireplace sizes, and while still a favorite, today's homeowners are drawn to the clean-face look of the FullView design without the additional metal and louvers. The market had spoken, and Mendota delivered—in the form of the new FullView 34 fireplace.

Combining the size of the DXV35 with the clean-face look consumers love, the FV34 joins its larger siblings the FV41, new FV41 Arch and FV46 to provide a full line of fireplace solutions to fit virtually any space.

The log set and burner configuration are identical to the DXV35/FV33i models, capturing the authentic look and feel of a wood log fire in its most beautiful burning stages. The fire is further enhanced with interior lining options including Red Soldier Course Brick and Black Porcelain Reflective, with additional color choices in the works.

A big part of the Mendota fireplace experience is selecting fronts, doors and accessories to bring each hearth to a perfect finish, and the FV34 is certainly no exception. All fronts and doors that are currently available for FullView insert model FV44i will also fit the new FV34, including the versatile Grace Collection offering arched and frame designs in two widths that can be used alone or in concert, along with optional touches such as accent corners and accent bars.

Like others in the FullView series, the FV34 features Mendota BurnGreen™ technology to provide the ultimate in style, convenience and green efficiency. Though sized for smaller areas, the FV34 still provides a generous 32,000 BTUH, with CSA P.4 efficiency ratings clocking in at an impressive 77.4%.

Expanding Horizons

ML39 MOD FullView Modern Linear Fireplace

Innovations

Clearly, aesthetics were a key driver in the development of the new FullView Modern Linear model, but Mendota also called upon the company's 100+ years of expertise in gas appliances to ensure the ML39 MOD delivers the same high-level performance, efficiency and safety that homeowners expect from the brand.

While many panoramic or modern fireplaces fall into the "decorative" category, Mendota FullView Modern Linear models are ANSI/AGA certified high efficiency wall furnaces. Using the smart, efficient BurnGreen™ platform, the ML39 MOD offers heat output of 34,250 BTUH, but still ranks among the industry's most efficient with a 77.3% rating based on the CSA P.4 test method.

Safety remains a top priority, and like all Mendota fireplaces and inserts, the ML39 MOD is in compliance with all government safety screen regulations. But thanks to innovations like the new micro safety screen that virtually disappears once installed over the fireplace, homeowners don't have to choose between being safe and having a beautiful hearth.

The second in the FullView Modern Linear series, Mendota's new ML39 MOD delivers every inch of the contemporary styling and exciting options of its predecessor—in a slightly smaller footprint designed to fit more rooms than ever.

Mendota's first foray into the panoramic category, the ML47 MOD, launched in the fall of 2014 to overwhelming response. For the new model, Mendota maintained the popular panoramic proportions, but made the firebox slightly narrower to create a size that's ideal for moderately sized living rooms, dining rooms or master suites.

What didn't get smaller are the number of fronts, finishes and other decorative options that allow homeowners to completely customize the look of their hearth. Three fronts, Grace, Traditions and Willowbrook, are available in five sophisticated finishes including Black, Antique Copper, Brushed Chrome, Swedish Nickel and Vintage Iron. The Grace front can also be paired with either the Traditions or Willowbrook fronts in complementary or contrasting finishes for a bolder hearth presence. Accent corners for the Grace and Traditions fronts in the same five finishes, accent bars in Black plus magnetic dome rivets in four finishes complete the look.

The options continue to the firebox interior. Fire base offerings range from spa-inspired choices like Driftwood, Forest Oak and Natural River Rock to selections such as Black or Liquid Clear Glass Diamonds that bring a little more "bling" to the fire. Even the panoramic interior lining can be customized, from perennial favorites such as Black and Copper Porcelain Reflective to newer metallic finishes including Midnight, Mocha and Silver.
