

## 24 x 24 Sewage/Grinder Package Systems Designed with the Contractor in Mind

Louisville, KY, USA – February 1, 2021

Zoeller Pump Company's **912 Sewage and 915 Grinder Package Systems** have a new design with the Contractor in mind. For years customers have made comments on these systems, 'We love your pumps, but your package system could use some improvement'. Well, Zoeller took that feedback, and Sales, Marketing, & Engineering teamed together to revamp these systems to not only deliver on the Contractor's needs, but to go above and beyond in the production of this new unit.

It started with the cover. Zoeller's new PSF cover has a removable access port for quick and easy inspection of the system's internal components. It has two threaded 2" discharges that can either both be used for discharge in a Duplex configuration, or that can be used for discharge and vent in a Simplex configuration. In a Duplex configuration additional space was left on the cover for a vent to be drilled. The new design also has a stainless-steel tag affixed to the cover that relays important pump/system and electrical information as well as leaves a space for the Contractor to leave their information for the system owner, should they so please.

A spring-loaded PVC float tree that snaps in and out of place with the help of molded grips was added inside the basin to make inspection and maintenance a breeze. Molded torque stops to hold the pump in place and increase stability were also added. On the outside Zoeller included a 360-degree molded handle for easy transportation and installation of the system that also serves as an anti-flotation device helping to secure the system in place and keep it there once installed. Finally, the system now ships with a clear construction cover to protect the unit from any masonry work or debris.
