

## NEW Qwik Jon® Toilet Systems

June 1, 2021 - Louisville, KY, USA

Zoeller recently added two new products to their upflush solutions line up. Both are great options that make it easy and cost effective for anyone to install a bathroom anywhere that wastewater removal is necessary, but gravity drainage is cost prohibitive. There's no need to spend money breaking concrete to dig when you can stay above grade with a Zoeller Qwik Jon.

**The Qwik Jon® Choice** is great if you're looking for a more cost-effective option without sacrificing any dependability. The Choice comes pre-assembled allowing for a quick and easy installation at the jobsite. It has a white, durable, ABS tank with a slim footprint. It has a built-in handle on either side of the unit making it easy to handle on the jobsite. Below the handles, the recessed side inlets are both 2" NPT and accept 1.5" PVC when connecting to other fixtures such as a tub, sink or shower. On the top of the system there is a 1-1/2" vent connection and 1" connection for the discharge line that can be reduced to 3/4" if needed. The entire lid to the tank is snap-fit to make inspection and

maintenance quick and easy. Unique to the Choice are its quick access ports that allow you to inspect and maintain the unit without having to remove the lid and piping. One gives you access to the Junction box and float mechanism, and the other gives you access to the cutter and cutter basket. The Qwik Jon Choice is a 1/3 HP Macerator, so the first thing that the waste sees when it comes into the system is the cutting mechanism. Its performance is a little less than that of the Premier, in that it's rated to handle toilet paper and organic waste only – making it a good fit for residential applications. The system is able to achieve 26' of shut off head and 33 GPM of flow.

**The Qwik Jon® Premier** still has a nice clean, polished look with a white, durable ABS tank though its footprint is just slightly larger than the Choice. Many of the outer features between these two units are the same, but the Premier doesn't come with the quick access ports that are on the Choice. These were left off because of the pump. The Premier comes preassembled with a true 1/2 HP grinder pump capable of handling toilet paper, organic waste, sanitary items and heavy fabric – making it great for residential and light commercial applications. It's important to really understand that the technology in this 1/2 HP grinder pump is the same technology used in Zoeller's 2 HP and larger commercial grade grinder pumps. Due to the superior performance, you won't need to service the system as much as you might need to with a macerator. This grinder pump has a shut off head of 29' and can achieve 45 GPM of flow at 5' feet of head.

Both the Qwik Jon Choice and Premier, when running, are no louder than the flushing of a toilet. These units can either be installed behind the wall or directly behind the toilet. All Qwik Jon products, like all other Zoeller Pump Company pumps, are 100% factory tested for their performance before leaving the facility - ensuring end users walk away with a dependable product every time. When you're looking for a bathroom solution that won't destroy your home, your budget, or take up months of your time – think Qwik Jon
