Insulspan® Showcases Building System at International Builders' Show

BLISSFIELD, MI – Insulspan® Structural Insulating Panels, who manufactures a structural insulated panel building system, announces its participation in the International Builders' Show (IBS) at the Orange County Convention Center (OCCC) in Orlando, FL on February 8-10, 2022.

The Insulspan Structural Insulated Panel (SIP) System provides a green building solution for single- and multi-family residential construction that reduces energy usage, takes less time to install, uses less dimensional lumber than traditional stick framing, and provides an airtight thermal envelope for a healthy, sustainable structure. The solid, one-piece, pre-cut structural insulated panels are created using two layers of performance rated oriented strand board (OSB) structurally laminated to a core of closed-cell rigid expanded polystyrene (EPS) insulation.

“Insulspan has been a leader in the residential and commercial structural insulated panel industry since 1990. Come see us during the show so that we can share with you why building with Insulspan SIPs will benefit you and your clients,” said Stephen Munn, Insulspan General Manager.

Insulspan's booth is located in the South Hall (S826) near the High Performance Building Zone.

ABOUT Insulspan: Insulspan® provides ready-to-assemble structural insulated panels ready to install as wall, roof, or floor components in single- and multi-family residential, and commercial construction projects. With two manufacturing locations in Blissfield, Michigan and Delta (Vancouver), British Columbia, Insulspan has shipped SIPs throughout the United States, Canada, and internationally. Insulspan is a wholly-owned subsidiary of PFB Corporation. PFB Corporation, a Calgary, Alberta-based public company, operates businesses throughout Canada and the United States. PFB Corporation is publicly traded on the Toronto Stock Exchange. www.insulspan.com
