**CHAMCLAD® PRESENTS *NEW* 12” BEAM & COLUMN COVER SYSTEM
AT INTERNATIONAL BUILDERS’ SHOW**

EDMONTON, AB – ChamClad® is excited to announce its’ attendance at the International Builders’ Show (IBS) at the Orange County Convention Center (OCCC) in Orlando, FL on February 8-10, 2022.

The ChamClad® 12” Beam & Column Cover System compliments and adds another sustainable dimension to our existing interior and exterior Cladding family. All are manufactured from 100% recycled window frame PVC compounds making them denser and harder and therefore more durable than flexible PVC (vinyl products). This new system is not only cost-effective but is also easy to install and offers high impact resistance, UV stability and inherent UL flame performance. When compared with metal or wood products used in similar applications, it has minimal environmental impact in terms of CO2 emissions and contributes to energy efficiency through low thermal conductivity. The 12” Beam & Column Cover System provides a green solution to the residential market (single & multi-family) and light commercial/industrial markets.

“Our goal has always been to supply the building industry with readily available Interior/Exterior Wall, Soffit & Ceiling green solutions. ChamClad® panels can be recycled without the need for further treatment allowing us to continue to develop and strengthen our sustainability goals. Please drop by and see how the ChamClad® family of products can benefit your projects” said Amber Gunderson, ChamClad® CEO.

ChamClad® is located in the West Hall at Booth #3059 (Canadian Pavilion).

ABOUT ChamClad®: ChamClad® provides laminated, 100% recycled rigid PVC products ready to install components for Exterior/Interior walls, Soffit & Ceiling, and 12” Beam & Column covers on single and multi-family residential projects as well as light commercial & industrial projects. Our manufacturing facility is located in Edmonton, Alberta and we have shipped our products throughout Canada and the United States. We are a Privately Held Company, operating throughout North America.
