PRESS RELEASE, 2024
FOR IMMEDIATE RELEASE

Utah company's debut at the International Builders Show is set to transform construction industry with Innovative File Sharing Solution

Salt Lake City, Utah — JobSite.codes, a pioneering Utah-based startup, is redefining the way home builders and interior designers share files, photos, and videos on job sites. Leveraging the power of QR codes, this innovative platform allows users to store, share, and update job site files, photos, and videos effortlessly, promoting a seamless collaboration among trade partners.

Innovative Approach to File Sharing

JobSite.codes introduces a 'Scan and Go' feature, enabling trade partners to access all necessary details with a simple QR code scan - no additional apps needed. This approach not only streamlines file management but also ensures that updated files are instantly available on the job site. Alerting trade partners about any file changes, the platform promises to keep everyone on the same page, or rather, the same screen.

Combating Traditional Challenges

The traditional use of paper-based spec books in construction is filled with challenges. These physical documents are prone to damage, loss, and particularly in custom homes will quickly become outdated, leading to potential to costly mistakes. JobSite.codes addresses these issues by providing a digital, real-time alternative, significantly reducing the risk of mistakes due to out-of-date information.

User-Friendly Features, for all.

It's a common problem that the average age within the industry is going up, not down. Knowing this, it's as equally important to bring innovative tech into the construction industry as it is to make these solutions work for a generation who's lacked this same access to technology. The platform offers a user-friendly admin portal for creating and managing job sites, adding collaborators, and managing files through a simple drag-and-drop interface. QR codes are automatically generated and remain consistent, even when new files are added, eliminating the need for reprinting. This system ensures that trade partners are always equipped with the latest drawings, specifications, videos, images, and designs.

Designed by the Industry, For the Industry

JobSite.codes was born from extensive discussions and trials with builders, designers, and trade workers. The platform was developed to address the specific needs of the construction industry, making it the first of its kind to be tailored to builders and interior designers. Its development was significantly influenced by insights from custom builders and industry professionals throughout the nation, ensuring its relevance and effectiveness in real-world scenarios.

Eco-Friendly and Cost-Effective

The platform is not only a technological leap but also an environmentally friendly solution. By eliminating the need for paper-based spec books, JobSite.codes contributes to reducing waste. Additionally, the service offers flexible pricing plans, including a money-saving annual subscription, underscoring its commitment to providing cost-effective solutions for the construction industry.

About JobSite.codes

Founded in Utah, JobSite.codes is dedicated to revolutionizing the construction industry through digital innovation. The company is driven by the mission to simplify file sharing on job sites, thereby enhancing efficiency, reducing errors, and fostering better collaboration among trade partners.
