ABOUT US

»» Our trajectory supports our present.

Mûchtek

TECNOFILES GROUP

Why choose us?

Our essence lies in continuous investment in innovation and cutting-edge technology, enabling us to offer a wide range of high-quality and efficient solutions in PVC profile systems for windows and doors.

MUCHTEK is the continuation and evolution of Tecnofiles, a sustainable company with a strong track record and recognized presence in the market. **MUCHTEK** paves the way for international growth and expansion within the business of PVC profile systems for windows and doors, ensuring high performance and the development of architectural products.

»» A network of more than 450 certified manufacturing workshops across Latin America, all operating in compliance with European manufacturing standards.

»» Technical and professional consulting services for all types of construction projects.

»» The largest manufacturing plant in Latin America combined with cutting-edge European technology, featuring 9 extruders and a production capacity of 1,000 metric tons per month, set on 7,000 m² exclusively dedicated to profile manufacturing for global markets.

»» A 3,000 m² distribution center supporting growing national and international demand.

»» A 2,000 m² lamination plant equipped with 5 laminating machines that use the greatest cutting-edge technology.

»» A PVC profile recycling plant promoting circular economy and environmental protection.

»» Tecnofiles SA's production plant holds ISO 9001 certification for the Design, Manufacturing, Commercialization and Technical Service of PVC profile systems for windows and doors.

We protect the environment through maximum energy efficiency.

Due to their design and construction, MUCHTEK windows and doors provide maximum thermal insulation, reducing energy consumption. The material's strength, impact resistance, along with metallic reinforcements and perimeter ironwork (combined with double glazing) result in windows and doors that offer the highest levels of water tightness and security.

MUCHTEK promotes the use of materials and designs that enable efficient energy use, leading to a significant reduction in building operational cost.

The company maintains a strong commitment to environment protection and sustainability by implementing processes that do not generate gas emissions or polluting liquids. Furthermore, all PVC profile offcuts rejected during the manufacturing process can be reused in other products. Low thermal conductivity in PVC windows and doors, the multi-chamber profile design, the perimeter locking system and the use of hermetic double glazing -all integral parts of the system- together enable a reduction of more than 50% in energy loss through windows and doors in comparison to other widely used systems.

One of MUCHTEK's main objectives is to accomplish greater energy efficiency and optimal use of natural resources. In line with this goal, improving thermal and acoustic insulation through windows helps reduce energy consumption and CO2 emissions into the atmosphere.

As part of its commitment to sustainable construction and to raising awareness of climate change and environmental issues, the company is a member of the **Argentina Green Building Council**. Operating under the World Green Building Council's licence, the Council serves as a supporting network for implementing both global and local sustainability initiatives.

MUCHTEK's profile systems contribute to earning points under LEED standards in the following categories:

- › Materials and resources.
- › Environmental quality.
- › Energy and atmosphere.

In this way, we promote sustainable development and environmentally conscious design, supporting green initiatives and fostering the integration of sustainable technologies within the building industry. In line with this commitment, MUCHTEK adheres to various laws, decrees and national regulations aimed at promoting rational and efficient energy use.

In collaboration with the Undersecretary of Energy and Mining, we have developed an **Energy Efficiency Label for Exterior Windows**, promoting the use of efficient windows that reduce energy loss in homes. The company participates in various

committees of IRAM (Argentine Institute of Certification and Standardization), focusing on regulatory studies in areas such as Sustainable Construction, Energy Efficiency, Acoustics and Electroacoustics, Construction Carpentry and Light Facades).

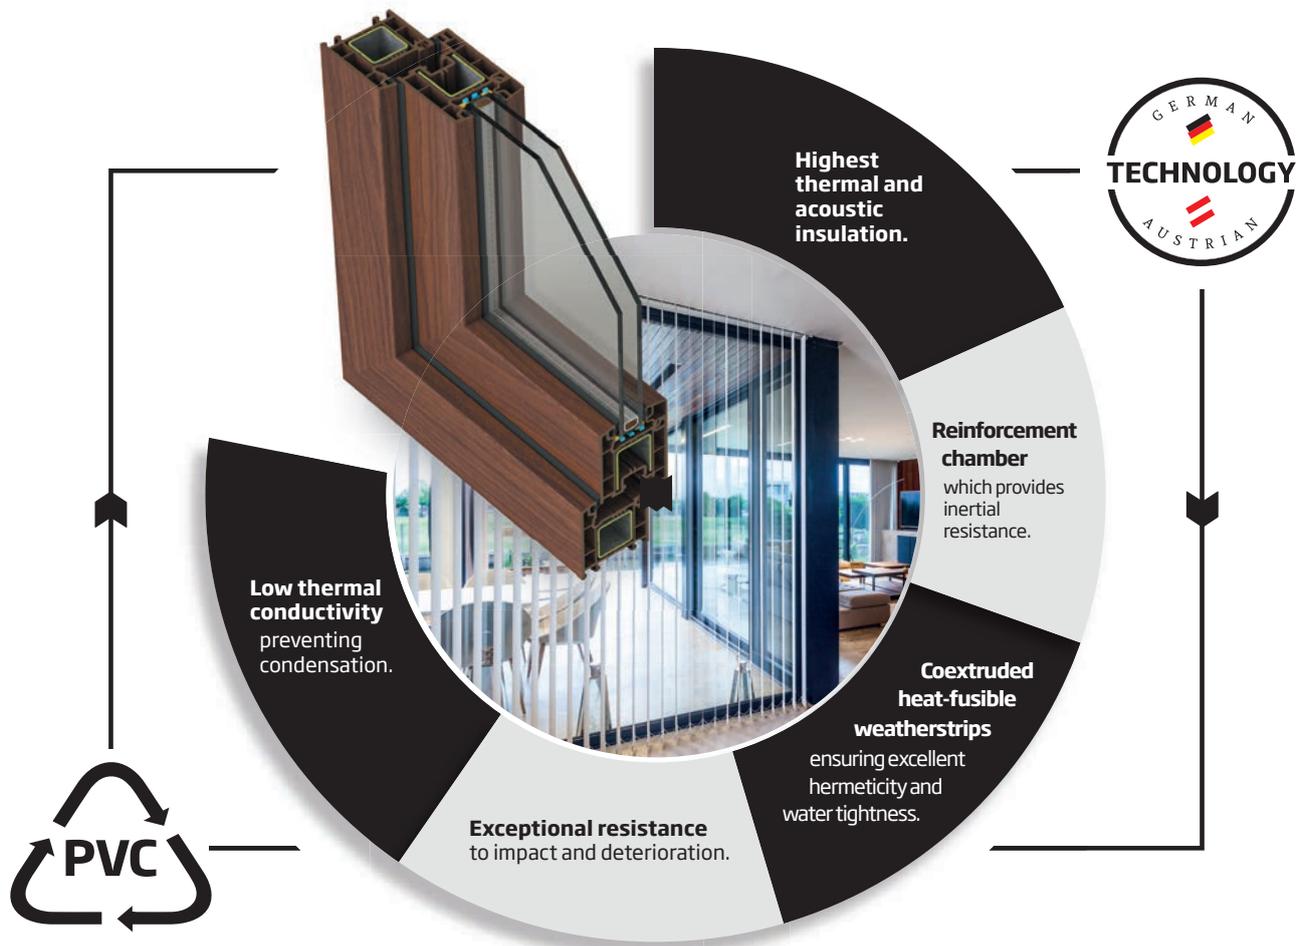

By accessing to www.etiquetadoventanas.energia.gob.ar, you can learn more about energy efficiency labeling according to **IRAM standard 11507-6**.

ABOUT US

»» Profile composition

PVC Resin
UNIPAR
www.unipar.com

PVC is environmentally friendly and highly durable. It features low thermal conductivity, is fire-resistant, and offers long-lasting performance.

Impact Modifier
DOW
www.dow.com

MUCHTEK formulations incorporate a high proportion of impact modifiers, ensuring compliance with the UNE12608 European Standard for impact resistance.

Titanium Dioxide
INEOS
www.ineos.com

The titanium dioxide used in our formulations is sourced from North America and provides up to 10 years of outdoor durability.

Thermoplastic Rubber
OMNOVA
www.omnova.com

We use French thermoplastic rubber that allows the weatherstrips of our profiles to be fully heat-fusible, ensuring excellent water tightness.

Thermoplastic Rubber
NITRIFLEX
www.nitriflex.com.br

The calcium zinc stabilizer ensures thermal stability and prevents discoloration during the PVC profile extrusion process.

Calcium Zinc Stabilizer
REAGENS-VARTECO
www.reagensvarteco.com

»» Production technology

Extruders
KRAUSSMAFFEI
www.kraussmaffei.com

We operate several extruders that allow us to achieve an annual production capacity of 12,000 metric tons of profiles.

Tooling
GREINER / EXELLIQ
www.exelliq.com

We use Austrian Red Toolings, the latest generation of technology developed globally by Greiner.

Laminating machines
BARBERAN
www.barberan.com

We implement innovative Hotmelt technology to ensure the highest quality throughout the lamination process.

»» Guaranteed quality

Arc test chamber
XENON TEST
www.q-lab.com/es-es

Xenon Test is a full-featured lightfastness, weathering, and photostability chamber that reproduce the damage caused by full-spectrum sunlight, heat, and water.

Window test rig
KS SCHULTEN
www.ksschulten.com

The test rig enables performance rating of PVC windows under IRAM standards for air permeability, water tightness and wind resistance.

Profile dimensional measurement
ASCONA
www.ascona.de

We use the latest cutting-edge European technology to carry out dimensional measurements of profiles during the laboratory quality control process.

Lamination processes
Benecke -Horns
Surface Group
www.continental-corporation.com

The German lamination processes for PVC profiles stand out for their innovative finishes, refined textures, excellent outdoor resistance and long-lasting durability.

Laminating adhesives
KLEIBERIT
www.kleiberit.com

Thanks to Cool Colors technology (cold pigmentation), surface heating is reduced regardless of color, extending the life cycle of the profiles.

Laminating adhesives
TAKA
www.taka.it

MUCHTEK MEMBERSHIPS

We are part of and support several institutions to promote industry growth, professional updating and continuous improvement.

Vivienda de Hormigón Industrializada en Sitio

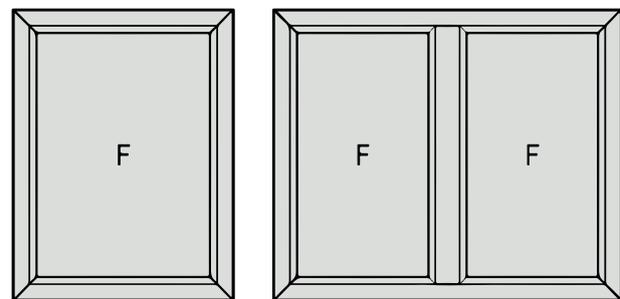

EFFICIENT LINE

Fixed Panel System

Offered in two profile dimensions: **2,17"** or **2,64"** in depth, which can be applied to Double Contact systems.

Series **58-55** and **58-67**

Double Contact System

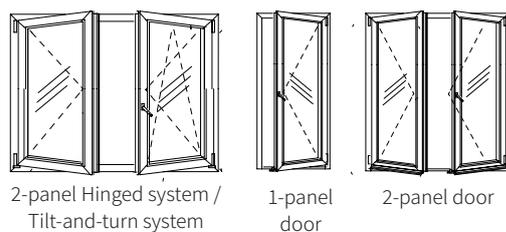

FEATURES THE FOLLOWING SYSTEMS:
 Hinged (inward/outward), tilt-and-turn, projecting, awning, folding and parallel sliding.

With internal galvanized steel reinforcements that enable the design of large windows and doors with simple or double glazing up to 1,34" thick.

>> Series **67-100**

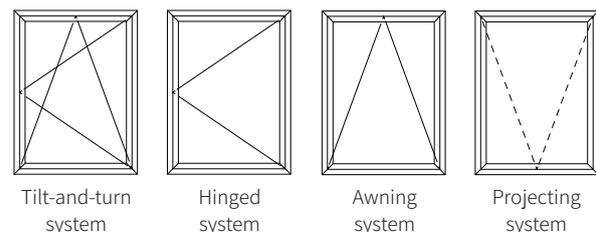

>> Series **55-69, 55-85 and 67-85**

2-panel Hinged system /
Tilt-and-turn system

ECO SLIDE

Sliding fixed / mobile

ECO PATIO DOOR

Sliding fixed / mobile

ECO MINI SLIDE

Lightweight sliding

- > Lightweight sliding system with high assembly efficiency.
- > Suitable for 2 or 3 sashes.
- > Can be laminated in a wide range of colors and textures.

ECOLIFE

Lightweight double contact

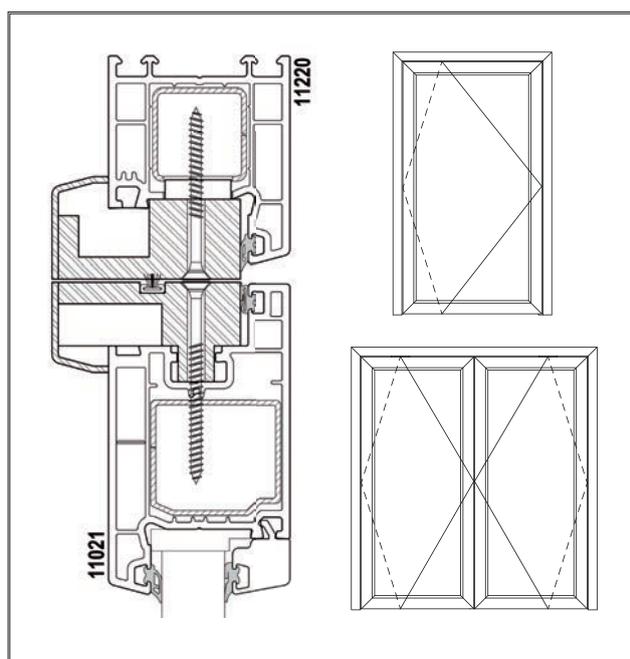

- > Great thermo-acoustic insulation, airtightness and security.
- > Supports single and double glazing up to 17 mm thick.
- > Can be laminated in a wide range of colors and textures.

PIVOT DOOR

- > Design, style and comfort.
- > Resistance.
- > Thermal and acoustic insulation.
- > Fire-resistant.
- > Low maintenance.
- > Long life cycle.
- > Compatible with single or double glazing up to 1,34" and panels.
- > Multipoint lock.
- > Premium stainless steel hardware.

This door is designed to enhance and make main entrances stand out.

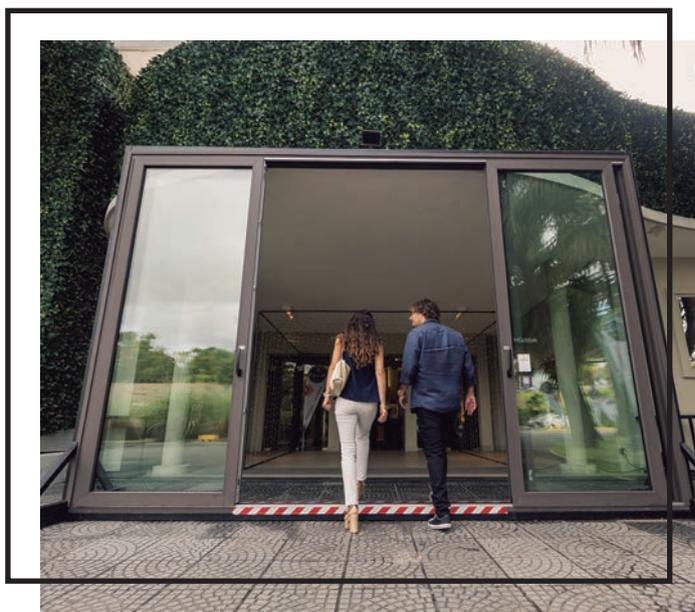

EVOLUTION LINE

Fixed-mobile sliding system

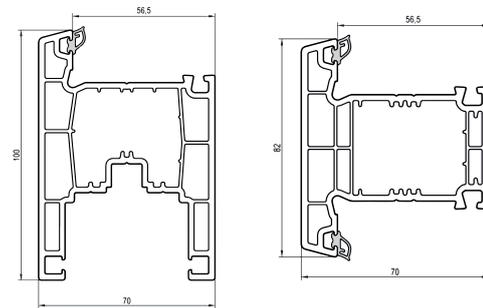

The sliding system evolution.

- > Designed for demanding projects with extreme weather conditions and high wind pressure.
- > Ensures maximum hermeticity and watertightness.
- > Hardware system with active lock points at the central meeting point.
- > Special transverse panel closing mechanism in relation to the frame profile.
- > PVC weatherstrips post co-extruded.
- > Compatible with double or triple hermetic glazing up to 1,81”.
- > Soft-open and soft-close functions provide superior comfort and security for users.

JUMBO LINE

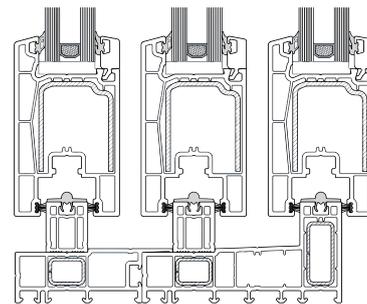

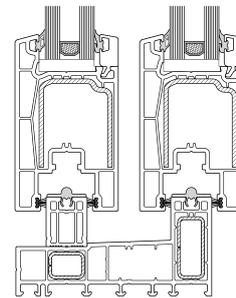

Sliding system

Large-span windows system to enjoy the best views.

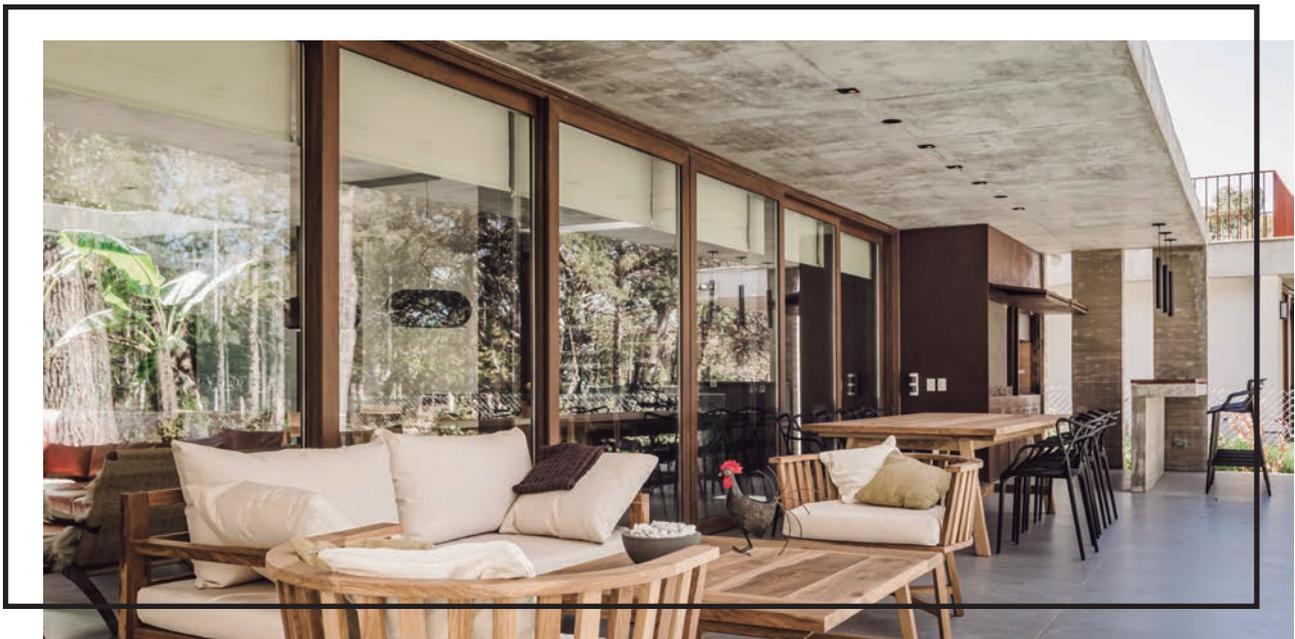

- › Equipped with internal galvanized steel reinforcement.
- › Suitable for glazing glass panes of up to 1,34" thick.
- › Frame-attachable guide system supporting multiple panels.
- › Maximum inertia reinforcements ensure excellent functionality and performance.
- › Compatible with PVC mosquito screens.

» Systems with two or more guides.

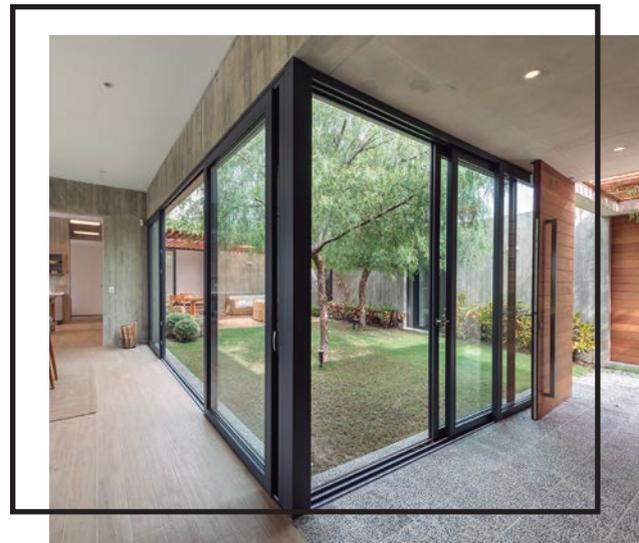

Sello
**Buen
Diseño**
argentino

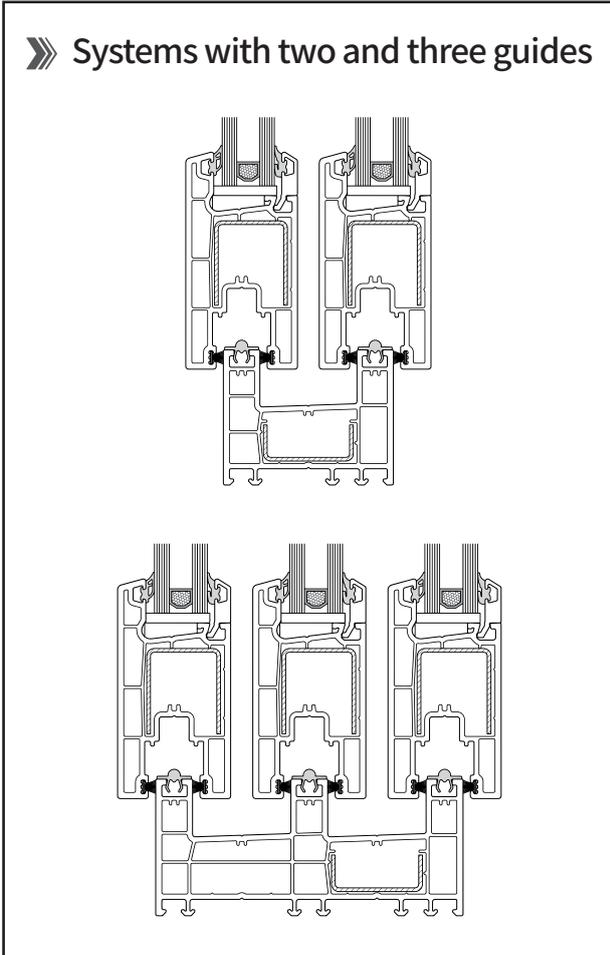

PRIME LINE

Sliding system

- > Sliding system suitable for 2, 3, 4 and 6 movable panels.
- > Suitable for glazing glass panes of up to 0,94”.
- > New central meeting points.

>> Systems with two and three guides

>> Prime panel 74

Lighter panel designed for smaller windows.

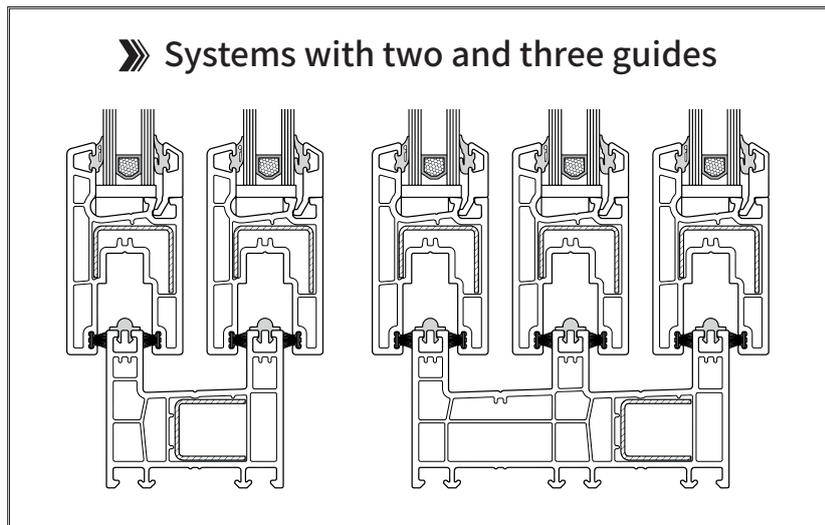

Technical drawing of the Prime panel 74 profile. The drawing shows the profile's dimensions: a height of 74, a width of 46, and a depth of 56. The profile is labeled with the number 92010.

11033:
 Prime panel 74

ADVANCE LINE

Sliding system

- > Compact sliding system up to 6 movable panels.
- > Suitable for glazing glass panes of up to 0,67" thick.
- > Excellent cost/benefit ratio.

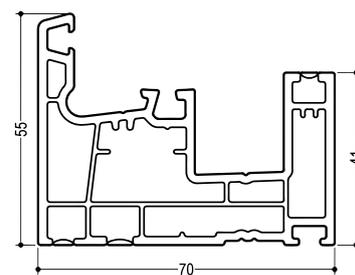

Fixed-mobile monorail >> sliding system

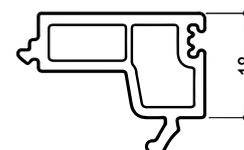

Monorail sliding window available with one sliding and one fixed panel or with a central fixed panel and two side sliding panels.

11244: Advance movable-fixed frame

11330: Advance movable-fixed panel

>>> Complementary products

COVER SYSTEM

Specially designed for the renovation and retrofit of any type of windows and doors: painted sheet, wood, iron, aluminium, composite materials, etc.

The use of the Cover System makes the frame of the pre-existing window or door system remain completely hidden. This is an excellent solution for those technical problems that arise during the recycling process, in terms of both quality and aesthetics, since it does not require any masonry work before or after installation. It is cost-effective and easy to install.

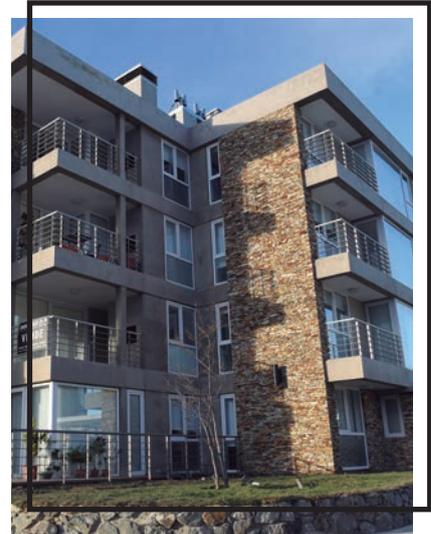

Suitable for both exterior and interior installations.

Exterior

Interior

MOSQUITO SCREENS

> Fixed or sliding mosquito screen systems.

> Exclusively developed by **MUCHTEK** and compatible with all our designs.

> Available in a wide variety of colors and textures.

SHUTTER

Provides darkening, privacy, and additional protection for the windows.

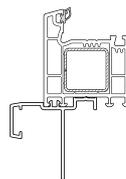

LOUVER

Designed to provide permanent ventilation and solar control while maintaining room privacy.

CLIPPING FINS

Specially designed to optimize installation in both industrialized and dry-construction systems.

The widest range of colors and textures for your windows.

Choose the style you like best.

German quality and technology in wood-like, matte and glossy laminations for PVC profiles.

《WALL PANEL》

Interior

For interior design, decoration and architectural finishes.

A wide variety of colors and textures, combining PVC resistance and durability to provide an excellent solution for each space.

Interior use only

《Oak》

《Eucalyptus》

《Poplar》

《Walnut》

《Teak》

Easy to install and clean.

No maintenance required.

Hypoallergenic, moisture-resistant, stain-resistant, termite-resistant.

Great thermal comfort.

Suitable for direct installation on all types of walls, cemented surfaces and other materials.

《WALL PANEL》

Exterior

Ideal premium cladding for facades and exterior surroundings.

Designed to maintain the appearance and texture of natural wood combined with PVC resistance and durability.

» Wide range of colors and textures available.

No maintenance required.

UV-resistant.

Moisture- and water-resistant.

Sustainable, eco-friendly and recyclable.

Exterior-resistant.

Unalterable material.

« DECKS »

The PVC Deck is an ideal choice for architectural projects that demand durability, resistance and low maintenance.

-  Fire-resistant and antibacterial.
-  No maintenance required.
-  Easy and quick to install.
-  Moisture- and water-resistant.

» Abrasion-resistant laminated PVC

-  Honey Oak
-  Mountain Oak
-  Nutmeg Oak

» Acrylic-coated UPVC

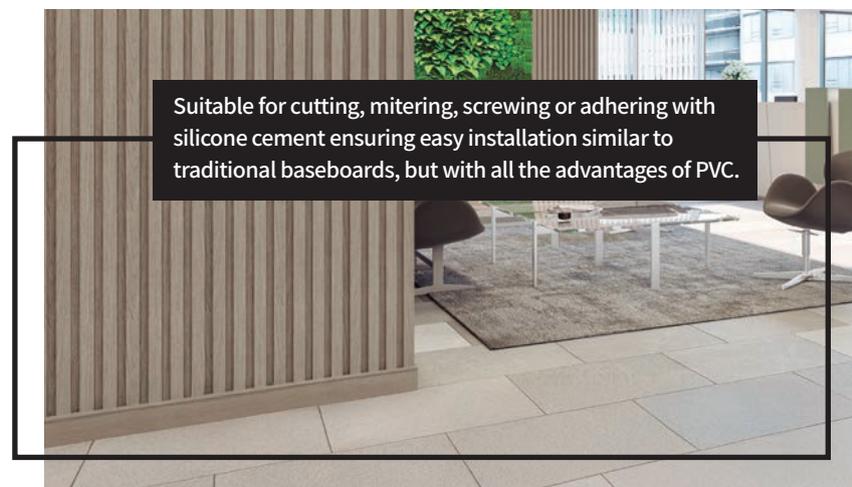

-  ASA Brown
-  ASA Gray

« BASEBOARDS »

Composed of two pieces

Base + trim, providing a second function as a cable duct while ensuring impact resistance. Suitable for all types of spaces, including those with strict hygiene and health standards.

-  Water- and moisture-resistant.
-  Soft and homogenous texture.
-  Splinter free.
-  Fire-resistant and antibacterial.
-  No maintenance required.
-  Quick and easy to install.
-  Long-lasting material.
-  Environmentally friendly.

Wide range of colors and textures to choose the most suitable design for your space

Mûchtek

TECNOFILES GROUP

Our history reflects the consolidation of a sustainable company, a leader in the manufacturing of high-performance PVC profiles of windows and doors and architectural products.

More than 50,000 construction projects per year in Latin America guarantee our leadership.

DEPARTMENT OF REGULATORY AND ECONOMIC RESOURCES (RER). BOARD AND CODE ADMINISTRATION DIVISION. NOTICE OF ACCEPTANCE (NOA)

MUCHTEK obtained the acceptance certificate to operate in the State of Florida, United States of America. Carried out testing: fire resistance and durability.

We are the leading company with a network of more than 450 certified manufacturing workshops across Latin America, all operating in compliance with European manufacturing standards.

We have commercial offices and logistics and distribution centers across Brazil, Chile and Mexico as well as international branches and a wide Network of Fabrication Workshops in Aruba, Bolivia, Colombia, Costa Rica, Ecuador, Panama, Paraguay, Peru, Uruguay and other countries across Latin America and the Caribbean.
